Installing OpenOffice.org 2.4.1

This installer will work on the following systems

Ubuntu, Xubuntu, Kubuntu, edubuntu, nuBuntu  
PC/OS 7.10, PC/OS OpenWorkstation 2008  
Debian 4

To remove the old instance of OpenOffice.org

From the OpenOffice.org for PC/OS folder open the DEBS folder right click the file 'oldremove' choose Open With Other Application. When that dialog opens at the very bottom click on Use a Custom Command. When that dialog opens type in xterm. It will ask you for your password and if you are in the sudoers group it will remove the old version of OpenOffice.org

To Install OpenOffice.org 2.4

From the OpenOffice.org for PC/OS folder open the DEBS folder right click the file 'ooinstall' choose Open With Other Application. When that dialog opens at the very bottom click on Use a Custom Command. When that dialog opens type in xterm. It will ask you for your password and if you are in the sudoers group it will install the new version of OpenOffice.org 2.3.1
