1 Documentation overview for hyperref

The documentation for package hyperref consists of several files:

Manual The **USER MANUAL** (also available as HTML).

README The **README** file (also available as text file). Here information is collected that is not yet in the manual: new features, package compatibility, limitations, known problems, ...

ChangeLog This file records the version history (also available as text file).

Options This file provides a short option summary.

Bookmark talk, slides Slides for the talk “PDF information and navigation elements with hyperref, pdfTeX and thumbpdf” at EuroT_EX 1999.

Bookmark talk, paper The paper version of the talk.

Source code documentation:

 **hyperref.dtx** This is the source code documentation for hyperref (this file).

backref.dtx “Back referencing from bibliographical citations”

nameref.dtx “Section name references in L^AT_EX”

2 Contents

1	Documentation overview for hyperref	1
2	Contents	2
3	File hycheck.tex	7
4	Package options and setup	10
4.1	Save catcodes	10
4.2	Checks with regular expressions	12
4.3	Compatibility with format dumps	13
4.4	Switches	14
5	Common help macros	15
5.1	Macros for recursions	15
5.2	Babel's protection of shorthand characters	16
5.3	Coordinate transformations	16
6	Dealing with PDF strings	17
6.1	Description of PDF strings	17
6.2	Definition of <code>\pdfstringdef</code>	17
6.2.1	Preprocessing	18
6.2.2	Expansion	23
6.2.3	Postprocessing	24
6.3	Encodings	29
6.3.1	XeTeX	29
6.3.2	Workaround for package <code>linguex</code>	30
6.3.3	PD1 encoding	30
6.3.4	PU encoding	31
6.4	Additional user commands	31
6.4.1	<code>\texorpdfstring</code>	31
6.4.2	Hooks for <code>\pdfstringdef</code>	31
6.5	Help macros for expansion	32
6.5.1	<code>\ignorespaces</code>	32
6.5.2	Babel languages	32
6.5.3	CJK patch	38
6.5.4	CJK bookmarks	38
6.5.5	CJK unicode	40
6.5.6	<code>\@inmathwarn-Patch</code>	44
6.5.7	Unexpandable spaces	45
6.5.8	Marker for commands	46
6.5.9	<code>\hspace fix</code>	46
6.5.10	Fix for AMS classes	46
6.5.11	Reference commands	46
6.5.12	Redefining the defining commands	49
6.5.13	<code>\ifnextchar</code>	50
6.5.14	<code>\@protected@testoptifnextchar</code>	50
6.6	Help macros for postprocessing	50
6.6.1	Generic warning.	50
6.6.2	Protecting spaces	51
6.6.3	Remove grouping braces	52
6.6.4	Catcode check	53
6.6.5	Check for wrong glyphs	56

6.6.6	Replacing tokens	57
6.6.7	Support for package <code>xspace</code>	58
6.6.8	Converting to Unicode	58
6.6.9	Support for UTF-8 input encoding	61
7	Support of other packages	64
7.1	Class memoir	64
7.2	Package subfigure	64
7.3	Package xr and xr-hyper	65
8	Help macros for links	65
9	Options	67
9.1	Help macros	67
9.2	Defining the options	69
10	Options for different drivers	74
11	Options to add extra features	76
12	Language options	77
13	Options to change appearance of links	83
14	Bookmarking	84
15	PDF-specific options	86
15.1	PDF/A	96
15.2	Patch for babel's <code>\texttilde</code>	97
15.2.1	Driver loading	98
15.2.2	Bookmarks	101
16	User hypertext macros	104
17	Underlying basic hypertext macros	110
18	Compatibility with the <i>BT_EX2html</i> package	114
19	Forms creation	114
19.1	Field flags	114
19.1.1	Declarations of field flags	116
19.1.2	Set submit flags	118
19.1.3	Set annot flags in fields	119
19.1.4	Pushbutton field	119
19.1.5	Check box field	120
19.1.6	Radio button field	120
19.1.7	Text fields	120
19.1.8	Choice fields	121
19.2	Choice field	121
19.3	Forms	123
20	Setup	130
21	Low-level utility macros	130

22 Localized nullifying of package	131
23 Package nohyperref	132
24 The Mangling Of Aux and Toc Files	133
25 Title strings	134
26 Page numbers	136
27 Every page	136
27.1 PDF /PageLabels	136
27.1.1 pdfTeX and VTeX	140
27.1.2 xetex	141
27.1.3 pdfmarkbase, dvipdfm, xetex	141
28 Automated L^AT_EX hypertext cross-references	143
29 Package lastpage support	147
30 Package ifthen support	149
31 Package titlesec and titletoc support	149
32 Package varioref support	150
33 Package longtable support	150
34 Equations	151
35 Footnotes	154
36 Float captions	159
37 Bibliographic references	161
37.1 Package harvard	164
37.2 Package chicago	166
38 Page numbers	167
39 Table of contents	167
40 New counters	169
41 AMSL^AT_EX compatibility	169
41.1 \@addtoreset and \numberwithin patches	170
42 Included figures	171
43 hyperindex entries	172
44 Compatibility with foiltex	175
45 Compatibility with seminar slide package	175

46	Configuration files	183

3 File hyccheck.tex

Many commands of \LaTeX or other packages cannot be overloaded, but have to be redefined by `hyperref` directly. If these commands change in newer versions, these changes are not noticed by `hyperref`. With this test file this situation can be checked. It defines the command `\checkcommand` that is more powerful than \LaTeX 's `\CheckCommand`, because it takes `\DeclareRobustCommand` and optional parameters better into account.

```

1 \langle *check\rangle
2 \documentclass{article}
3 \makeatletter

\checklatex Optional argument: release date of  $\LaTeX$ .
4 \newcommand*{\checklatex}[1][]{\%
5 \typeout{}}\%
6 \typeout{* Format: 'LaTeX2e' #1}\%
7 \typeout{\space\space Loaded: '\fmtname' \fmtversion}\%
8 }\%
```

`\checkpackage` The argument of `\checkpackage` is the package name without extension optionally followed by a release date.

```

9 \newcommand*{\checkpackage}[1]{\%
10 \def\HyC@package{#1}\%
11 \let\HyC@date\@empty
12 \@ifnextchar[\HyC@getDate\HyC@checkPackage
13 }
```

`\HyC@getDate` The release date is scanned.

```

14 \def\HyC@getDate[#1]{\%
15 \def\HyC@date{#1}\%
16 \HyC@checkPackage
17 }
```

`\HyC@checkPackage`

```

18 \def\HyC@checkPackage{\%
19 \typeout{}}\%
20 \begingroup
21 \edef\x{\endgroup
22 \noexpand\RequirePackage{\HyC@package}\%
23 \ifx\HyC@date\@empty\relax\else[\HyC@date]\fi\%
24 }\%
25 \x
26 \typeout{}}\%
27 \typeout{\%
28 * Package '\HyC@package'\%
29 \ifx\HyC@date\@empty
30 \else
31 \space\HyC@date
32 \fi
33 }\%
34 \@ifundefined{ver@\HyC@package.sty}{\%
35 }\typeout{\%
36 \space\space Loaded: '\HyC@package' \%
37 \csname ver@\HyC@package.sty\endcsname
38 }\%
39 }\%
40 }\%
41 }
```

`\checkcommand` The macro `\checkcommand` parses the next tokens as a \LaTeX definition and compares this definition with the current meaning of that command.

```

42 \newcommand*{\checkcommand}[1]{%
43   \begingroup
44   \ifx\long#1\relax
45     \expandafter\HyC@checklong
46   \else
47     \def\HyC@defcmd{#1}%
48     \expandafter\let\expandafter\HyC@next
49       \csname HyC@\expandafter\@gobble\string#1\endcsname
50     \expandafter\HyC@checkcommand
51   \fi
52 }
```

`\HyC@checklong` The definition command `\def` or `\edef` is read.

```

53 \def\HyC@checklong#1{%
54   \def\HyC@defcmd{\long#1}%
55   \expandafter\let\expandafter\HyC@next
56     \csname HyC@\expandafter\@gobble\string#1\endcsname
57   \HyC@checkcommand
58 }
```

`\HyC@checkcommand` The optional star of \LaTeX 's definitions is parsed.

```

59 \def\HyC@checkcommand{%
60   \ifx\HyC@next\relax
61     \PackageError{hyccheck}{%
62       Unknown command '\expandafter\strip@prefix\meaning\HyC@cmd'%
63     }\@ehd
64     \expandafter\endinput
65   \fi
66   \@ifstar{%
67     \def\HyC@star{*}%
68     \HyC@check
69   }{%
70     \let\HyC@star\@empty
71     \HyC@check
72   }%
73 }
```

`\HyC@check` The macro `\HyC@check` reads the definition command.

```

74 \def\HyC@check#1{%
75   \def\HyC@cmd{#1}%
76   \let\HyC@org@cmd#1%
77   \let#1\relax
78   \let\HyC@param\@empty
79   \HyC@Toks{}%
80   \let\HyC@org@optcmd\HyC@noValue
81   \let\HyC@org@robustcmd\HyC@noValue
82   \let\HyC@org@robustoptcmd\HyC@noValue
83   \HyC@next
84 }
```

`\HyC@noValue`

```

85 \def\HyC@noValue{NoValue}
```

`\HyC@newcommand` The code for `\newcommand`.

```

86 \def\HyC@newcommand{%
87   \let\HyC@@cmd\HyC@cmd
88   \@ifnextchar[\HyC@nc@opt\HyC@nc@noopt
89 }

```

`\HyC@Toks` A register for storing the default value of an optional argument.

```

90 \newtoks\HyC@Toks

```

`\HyC@nc@noopt` This macro `\HyC@nc@noopt` is called, if the parser has reached the definition text.

```

91 \long\def\HyC@nc@noopt#1{%
92   \edef\x{%
93     \expandafter\noexpand\HyC@defcmd
94     \HyC@star
95     \expandafter\noexpand\HyC@cmd
96     \HyC@param\the\HyC@Toks
97   }%
98   \x{#1}%
99   \HyC@doCheck
100 }

```

`\HyC@nc@opt` This macro scans the first optional argument of a \LaTeX definition (number of arguments).

```

101 \def\HyC@nc@opt[#1]{%
102   \def\HyC@param{{[#1]}}%
103   \@ifnextchar[\HyC@nc@default\HyC@nc@noopt
104 }

```

`\HyC@nc@default` Macro `\HyC@nc@default` scans the default for an optional argument.

```

105 \def\HyC@nc@default[#1]{%
106   \HyC@Toks={{[#1]}}%
107   \edef\HyC@optcmd{%
108     \expandafter\noexpand
109     \csname\expandafter\string\HyC@@cmd\endcsname
110   }%
111   \expandafter\let\expandafter\HyC@org@optcmd\HyC@optcmd
112   \HyC@nc@noopt
113 }

```

`\HyC@DeclareRobustCommand` `\DeclareRobustCommand{\cmd}` makes the command `\cmd` robust, that then calls `\cmd_` with an space at the end of the command name, defined by `\newcommand`. Therefore the further parsing is done by `\HyC@nc@opt` or `\HyC@nc@noopt` of the `\HyC@newcommand` chain.

```

114 \def\HyC@DeclareRobustCommand{%
115   \edef\HyC@robustcmd{%
116     \expandafter\noexpand
117     \csname\expandafter\expandafter\expandafter\@gobble
118     \expandafter\string\HyC@cmd\space\endcsname
119   }%
120   \expandafter\let\expandafter\HyC@org@robustcmd\HyC@robustcmd
121   \expandafter\let\HyC@robustcmd\relax
122   \let\HyC@@cmd\HyC@robustcmd
123   \@ifnextchar[\HyC@nc@opt\HyC@nc@noopt
124 }

```

`\HyC@def` The parameter text of `\def` or `\edef` is stored in the token register `\HyC@Toks`.

```

\HyC@edef
125 \def\HyC@def#1#{%
126   \HyC@Toks={#1}%

```

```

127 \HyC@nc@noopt
128 }
129 \let\HyC@edef\HyC@def

```

`\HyC@doCheck` This command performs the checks and prints the result.

```

130 \def\HyC@doCheck{%
131 \typeout{* Checking '\HyC@string\HyC@cmd':}%
132 \HyC@checkItem{cmd}%
133 \HyC@checkItem{robustcmd}%
134 \HyC@checkItem{optcmd}%
135 \HyC@checkItem{robustoptcmd}%
136 \endgroup
137 }

```

`\HyC@checkItem` A single check.

```

138 \def\HyC@checkItem#1{%
139 \expandafter\ifx\csname HyC@org@#1\endcsname\HyC@noValue
140 \else
141 \expandafter\expandafter\expandafter\ifx
142 \csname HyC@#1\expandafter\endcsname
143 \csname HyC@org@#1\endcsname
144 \expandafter\HyC@checkOk\csname HyC@#1\endcsname
145 \else
146 \expandafter\HyC@checkFailed
147 \csname HyC@#1\expandafter\endcsname
148 \csname HyC@org@#1\endcsname
149 \fi
150 \fi
151 }

```

`\HyC@string` Some shorthands.

```

\HyC@meaning 152 \def\HyC@string#1{\expandafter\string#1}
153 \def\HyC@meaning#1{\expandafter\meaning#1}

```

`\HyC@checkOk` The result, if the check succeeds.

```

154 \def\HyC@checkOk#1{%
155 \typeout{\space\space'\HyC@string#1' ok.}%
156 }

```

`\HyC@checkFailed` The result, if the check fails.

```

157 \def\HyC@checkFailed#1#2{%
158 \typeout{\space\space'\HyC@string#1' failed.}%
159 \typeout{\space\space* original: \meaning#2}%
160 \typeout{\space\space* expected: \HyC@meaning#1}%
161 }

162 % *****
163 </check>
164 <*package>

```

4 Package options and setup

4.1 Save catcodes

There are many packages that change the standard catcodes.

First we save the original meaning of ‘ and = in the token register \toks@, because we need the two characters in the macros \Hy@SetCatcodes and \Hy@RestoreCatcodes.

```

165 \begingroup
166 \makeother\'%
167 \makeother\=%
168 \edef\x{%
169   \edef\noexpand\x{%
170     \endgroup
171     \noexpand\toks@{%

227 \x\"%
228 \x\'%
229 }%
230 \endgroup

```

```

231 \Hy@SetCatcodes

```

It needs the December 95 release of L^AT_EX, because it uses `\protected@write`, and it defines commands in options; and the page setup internal code changed at that point. It'll probably break with the later releases!

```

4.3 Compatibility with format dumps

`\AfterBeginDocument` For use with pre-compiled formats, created using the `ldump` package, there needs to be 2 hooks for adding material delayed until `\begin{document}`. These are called `\AfterBeginDocument` and `\AtBeginDocument`. If `ldump` is not loaded, then a single hook suffices for normal \LaTeX processing.

The default definition of `\AfterBeginDocument` cannot be done by `\let` because of problems with `xypic`.

```

283 \@ifundefined{AfterBeginDocument}{}%
284 \def\AfterBeginDocument{\AtBeginDocument}%
285 }{}%

```

`\Hy@AtBeginDocument` For the case that package ‘hyperref’ is loaded using `\AtBeginDocument`, we have to wrap the calls of `\AtBeginDocument`/`\AfterBeginDocument` in `\AtEndOfPackage`. However, packages must be loaded in `\AtEndOfPackage` *before* package ‘kvoptions’ has to perform its option cleanup. Therefore we use a hook.

```

286 \def\Hy@AtBeginDocument{%
287 \ltx@LocalAppendToMacro\Hy@AtBeginDocumentHook
288 }

```

`\Hy@AtEndOfPackage`

```

289 \def\Hy@AtEndOfPackage{%

```

5.1 Macros for recursions

\Hy@ReturnAfterElseFi The commands \Hy@ReturnAfterElseFi and \Hy@ReturnAfterFi avoid a too deep
 \Hy@ReturnAfterFi \if-nesting especially for recursive macros.

```

394 \long\def\Hy@ReturnAfterElseFi#1\else#2\fi{\fi#1}
395 \long\def\Hy@ReturnAfterFi#1\fi{\fi#1}

396 \let\Hy@ReturnEnd\@empty
397 \long\def\Hy@ReturnAfterFiFiEnd#1\fi#2\Hy@ReturnEnd{\fi\fi#1}
398 \long\def\Hy@ReturnAfterElseFiFiEnd#1\else#2\Hy@ReturnEnd{\fi\fi#1}

```

5.2 Babel's protection of shorthand characters

`\Hy@safe@activetrue` Babel's switch setting commands cannot be used directly, because they can be undefined if
`\Hy@safe@activetrue` babel is not loaded.

```
399 \def\Hy@safe@activetrue{\csname @safe@activetrue\endcsname}  
400 \def\Hy@safe@activesfalse{\csname @safe@activesfalse\endcsname}
```

5.3 Coordinate transformations

At some places numbers in pdf units are expected (eg: FitBH, ...). The following macros perform the transformation from TeX units (pt) to PDF units (bp).

`\hypercalcbp` The user macro `\hypercalcbp` can be used, for example, inside option values:

```
pdfstartview={FitBH \hypercalcbp{\paperheight-\topmargin-1in}}
```

- It cannot be used inside `\usepackage`, because LaTeX expands the options before package `hyperref` is loaded and `\hypercalcbp` is defined.
- With e-TeX extensions an expandable implementation is very easy; `\hypercalcbp` can be used everywhere and is expanded at use.
- Without e-TeX's features `\hypercalcbp` cannot be implemented expandable (practically) and have to be supported by `\hypercalcbpdef`. Limitations:
 - Works only in options that use `\hypercalcbpdef` (currently only `pdfstartview`).
 - For calculations package `calc` has to be loaded.
 - The expansion of the argument is done at definition time.

Example (TeX):

```
\usepackage{calc}  
\usepackage[...]{hyperref}  
\hypersetup{  
  pdfstartview={FitBH \hypercalcbp{\paperheight-\topmargin-1in  
    -\headheight-\headsep}  
}
```

`\hypercalcbp`

```
401 \begingroup\expandafter\expandafter\expandafter\endgroup

441 \fi

```

6 Dealing with PDF strings

The PDF string stuff done by Heiko Oberdiek.

Naming convention: All internal commands that are only needed by `\pdfstringdef` are prefixed with `\HyPsd@`.

6.1 Description of PDF strings

The PDF specification defines several places to hold text strings (bookmark names, document information, text annotations, etc.). The PDF strings have following properties:

- They are surrounded by parentheses. The hexadecimal form is not supported.
- Like PostScript language strings they use the same escaping mechanism:

<code>\\</code>	the backslash itself
<code>\), \((</code>	unbalanced parentheses
<code>\n, \r, \t, \b, \f</code>	special white space escape sequences
<code>\ddd</code>	octal character code <i>ddd</i>
- Strings are stored either in `PDFDocEncoding`, which is a superset of `ISOLatin1` and is compatible with Unicode with character codes below 256, or in Unicode.

6.2 Definition of `\pdfstringdef`

The central macro for dealing with PDF strings is `\pdfstringdef`. It defines a command `#1` to be the result of the conversion from the string in `#2` to a legal `PDFDocEncoded` string. Currently the definition is global, but this can be changed in the future.

Important: In \TeX 's view PDF strings are written to a file and are expanded only in its mouth. Stomach commands that cannot be expanded further aren't executed, they are written verbatim. But the PDF reader that reads such a string isn't a \TeX interpreter!

The macro `\pdfstringdef` consists of three main parts:

1. Preprocessing. Here the expansion is prepared. The encoding is set and many commands are redefined, so that they work appropriate.
2. Expansion. The \TeX string is expanded the first time to get a PDF string.
3. Postprocessing. The result of the expansion is checked and converted to the final form.

$\backslash\text{pdfstringdef}$ $\backslash\text{pdfstringdef}$ works on the tokens in #2 and converts them to a PDF string as far as possible:

- The result should obey the rules of the PDF specification for strings.
- The string can safely be processed by \TeX , because the tokens have only catcodes 10 until 12.

The result is stored in the command token given in #1.

```
442 \def\pdfstringdef#1#2{%
```

Many redefinitions are needed, so all the work is done in a group.

```
443 \begingroup
```

6.2.1 Preprocessing

Octal escape sequences. To avoid problems with eight bit or non printable characters, the octal escape notation is supported. So most glyphs in the encoding definitions for PD1 and PU produce these octal escape sequences. All three octal digits have to be used:

- Wrong results are avoided, if digits follow that are not part of the octal sequence.
- Macros rely on the fact that the octal sequences always consist of three digits (vtx driver, Unicode support).

The escape sequences start with a backslash. By $\backslash\text{string}$ it will be printed. Therefore it is ensured that the \TeX escape character indeed prints as a normal backslash. Eventually this line can be removed, because this is standard \LaTeX behaviour.

```
444 \escapechar'\%
```

From the view of \TeX an octal sequence consists of the command tokens $\backslash 0$ until $\backslash 3$ and two digits. For saving tokens $\backslash 0$, $\backslash 1$, $\backslash 2$, and $\backslash 3$ are directly used without a preceding $\backslash\text{string}$ in the glyph definitions. This is done here locally by defining the $\backslash 0$ until $\backslash 3$ commands. So the user can use octal escape sequences directly, the disadvantage is that a previous definition of these short commands does not apply.

```
445 \edef\0{\string\0}%
446 \edef\1{\string\1}%
447 \edef\2{\string\2}%
448 \edef\3{\string\3}%
```

Setting font encoding. The unicode encoding uses $\backslash 8$ and $\backslash 9$ as marker for the higher byte. $\backslash 8$ is an abbreviation for the higher bytes 0 until 7 that can be expressed by one digit. $\backslash 8$ will be converted to $\backslash 00$. However $\backslash 9$ only marks the next three digits as higher byte and will be removed later.

The encoding is set by $\backslash\text{enc@update}$ for optimizing reasons.

```
449 \ifHy@unicode
450 \edef\8{\string\8}%
451 \edef\9{\string\9}%
452 \fontencoding{PU}%
```

```

453 \HyPsd@UTFviii
454 \def\ifpdfstringunicode##1##2{##1}%
455 \else
456 \fontencoding{PD1}%
457 \def\ifpdfstringunicode##1##2{##2}%
458 \fi
459 \let\utf@viii@undeferr\HyPsd@utf@viii@undeferr
460 \enc@update

```

Internal encoding commands. `\pdfstringdef` interpretes text strings which are not allowed to contain mathematical stuff. The text glyph commands will produce a warning, if called in math mode. But this warning disturbs while expanding. Therefore we check for math mode here, before `\@inmathwarn` will be disabled (see below).

```

461 \@inmathwarn\pdfstringdef

```

If a glyph is used, that isn't in the PD1/PU encoding there will be an infinite error loop, because the NFSS encoding stuff have to be expanded unprotected (`\edef`), so that the assignments of `\@changed@cmd` don't take place. To patch this behaviour I only found `\@inmathwarn` as a usable hook. While an `\edef` a warning message by `\@inmathwarn` or `\TextSymbolUnavailable` cannot be give out, so `\@inmathwarn` should be disabled. And with the help of it the assignments in `\@changed@cmd` can easily be caught (see below).

```

462 \let\@inmathwarn\HyPsd@inmathwarn

```

Unknown composite characters are built with `\add@accent`, so it is redefined to provide a warning.

```

463 \let\add@accent\HyPsd@add@accent

```

Commands that don't use NFSS directly. There are several commands that prints characters in the printable ASCII area that don't obey the NFSS, so they have to be redefined here.

```

464 \let\{\textbraceleft
465 \let\}\textbraceright
466 \let\\\textbackslash
467 \let\#\textnumbersign
468 \let\$\textdollar
469 \let\%\textpercent
470 \let\&\textampersand
471 % \let\~\textasciitilde
472 \let\_ \textunderscore
473 \let\P\textparagraph
474 \let\ldots\textellipsis
475 \let\dots\textellipsis

```

Newline `\newline` or `\\` do not work in bookmarks, in text annotations they should expand to `\r`. In pdf strings `\\` stands for a backslash. Therefore the commands are disabled now. The user can redefine them for a result what he want:

backslash: `\pdfstringdefDisableCommands{\let\\\textbackslash}`

new line: `\pdfstringdefDisableCommands{\let\\\textCR}`

disabled: `\pdfstringdefDisableCommands{\let\\\empty}`

At any case, however, the optional argument or the star cannot be scanned in a 100% sure manner.

```

476 \def\{\pdfstringdefWarn\}%
477 \def\newline{\pdfstringdefWarn\newline}%

```

Logos. Because the box shifting used in the T_EX logo does not work while writing to a file, the standard T_EX logos are redefined.

```

Patch for cjk bookmarks.

```
575 \HyPsd@CJKhook
```

User hook. The switch `\Hy@pdfstring` is turned on. So user commands can detect that they are processed not to be typesetted within \TeX 's stomach, but to be expanded by the mouth to give a PDF string. At this place before interpreting the string in `#2` additional redefinitions can be added by the hook `\pdfstringdefPreHook`.

The position in the middle of the redefinitions is a compromise: The user should be able to provide his own (perhaps better) redefinitions, but some commands should have their original meaning, because they can be used in the hook (`\bgroup`, or `\@protected@testopt`, and `\@ifnextchar` for `\renewcommand`).

```
576 \Hy@pdfstringtrue
577 \pdfstringdefPreHook
```

Spaces. For checking the token of the string, spaces must be masked, because they cannot be caught by undelimited arguments.

```
578 \HyPsd@LetUnexpandableSpace\space

588 \let\bgroup\/%  
589 \let\egroup\/%
```

Redefinitions of miscellaneous commands. Hyphenation does not make sense.

```
590 \let\discretionary\@gobbletwo  
\@ifstar is defined in LATEX as follows:
```

```
\def\@ifstar#1{\@ifnextchar *{\@firstoftwo{#1}}}
```

`\@ifnextchar` doesn't work, because it uses stomach commands like `\let` and `\futurelet`. But it doesn't break. Whereas `\@firstoftwo{#1}` gives an error message because `\@firstoftwo` misses its second argument.

A mimicry of `\@ifnextchar` only with expandible commands would be very extensive and the result would be only an approximation. So here a cheaper solution follows in order to get rid of the error message at least:

```
591 \def\@ifnextchar{\HyPsd@ifnextchar\@ifnextchar}%  
592 \def\kernel@ifnextchar{\HyPsd@ifnextchar\kernel@ifnextchar}%  
593 \def\new@ifnextchar{\HyPsd@ifnextchar\new@ifnextchar}%  
594 \let\@protected@testopt\HyPsd@protected@testopt
```

Support for package 'args':

```
595 \let\@protected@testopt@xargs\HyPsd@protected@testopt
```

6.2.2 Expansion

There are several possibilities to expand tokens within L^AT_EX:

\protected@edef: The weakest form isn't usable, because it does not expand the font encoding commands. They are made robust and protect themselves.

\csname: First the string is expanded within a `\csname` and `\endcsname`. Then the command name is converted to characters with catcode 12 by `\string` and the first escape character removed by `\@gobble`. This method has the great *advantage* that stomach tokens that aren't allowed in PDF strings are detected by T_EX and reported as errors in order to force the user to write correct things. So he get no wrong results by forgetting the proofreading of his text. But the *disadvantage* is that old wrong code cannot processed without errors. Mainly the error message is very cryptic and for the normal user hard to understand. T_EX provides no way to catch the error caused by `\csname` or allows to support the user with a descriptive error message. Therefore the experienced user had to enable this behaviour by an option `exactdef` in previous versions less or equal 6.50.

\edef This version uses this standard form for expansion. It is stronger than L^AT_EX's `\protected@edef`. So the font encoding mechanism works and the glyph commands are converted to the correct tokens for PDF strings which the definitions of the PD1 encoding. Because the protecting mechanism of L^AT_EX doesn't work within an `\edef`, there are situations thinkable where code can break. For example, assignments and definitions aren't performed and so undefined command errors or argument parsing errors can occur. But this is only a compatibility problem with old

texts. Now there are possibilities to write code that gives correct PDF strings (see `\texorpdfstring`). In the most cases unexpandable commands and tokens (math shift, grouping characters) remains. They don't cause an error like with `\csname`. However a PDF reader isn't \TeX , so these tokens are viewed verbatim. So this version detects them now, and removes them with an descriptive warning for the user. As additional features xspace support is possible and grouping characters can be used without problems, because they are removed silently.

Generic messages. While expanding via `\xdef` the `\Generic...` messages don't work and causes problems (error messages, invalid .out file). So they are disabled while expanding and removed silently, because a user warning would be too expensive (memory and runtime, `\pdfstringdef` is slow enough).

```
596 \begingroup
597 \let\GenericError\@gobblefour
598 \let\GenericWarning\@gobbletwo
599 \let\GenericInfo\@gobbletwo
```

Package french. This fix only works, if `\GenericError` is disabled.

```
600 \ifx\nofrenchguillemets\@undefined
601 \else
602 \nofrenchguillemets
603 \fi
```

Definition commands and expansion. Redefining the defining commands (see sec. 6.5.12). The original meaning of `\xdef` is saved in `\Hy@temp`.

```
604 \let\Hy@temp\xdef
605 \let\def\HyPsd@DefCommand
606 \let\gdef\HyPsd@DefCommand
607 \let\edef\HyPsd@DefCommand
608 \let\xdef\HyPsd@DefCommand
609 \let\futurelet\HyPsd@LetCommand
610 \let\let\HyPsd@LetCommand
611 \Hy@temp#1{#2}%
612 \endgroup
```

6.2.3 Postprocessing

If the string is empty time can be saved by omitting the postprocessing process.

```
613 \ifx#1\@empty
614 \else
```

Protecting spaces and removing grouping characters. In order to check the tokens we must separate them. This will be done with \TeX 's argument parsing. With this method we must the following item takes into account, that makes makes things a little more complicate:

- \TeX does not accept a space as an undelimited argument, it cancels space tokens while looking for an undelimited argument. Therefore we must protect the spaces now.
- An argument can be a single token or a group of many tokens. And within curly braces tokens aren't find by \TeX 's argument scanning process. Third curly braces as grouping characters cannot be expanded further, so they don't vanish by the

string expansion above. So these characters with catcode 1 and 2 are removed in the following and replaced by an marker for the xspace support.

- \TeX silently removes the outmost pair of braces of an argument. To prevent this on unwanted places, in the following the character | is appended to the string to make an outer brace to an inner one.

First the top level spaces are protected by replacing. Then the string is scanned to detect token groups. Each token group will now be space protected and again scanned for another token groups.

```

615 \HyPsd@ProtectSpaces#1%
616 \let\HyPsd@String\@empty
617 \expandafter\HyPsd@RemoveBraces\expandafter{#1|}%
618 \global\let#1\HyPsd@String

```

Check tokens. After removing the spaces and the grouping characters the string now should only consists of the following tokens/catcodes:

- 0 command names with start with an escape character.
- 3 math shift
- 4 alignment tabs
- 6 parameter, but this is unlikely.
- 7 superscript
- 8 subscript
- 11 letter
- 12 other
- 13 commands that are active characters.

After `\HyPsd@CheckCatcodes` the command `\HyPsd@RemoveMask` is reused to remove the group protection character |. This character is needed to ensure that the string at least consists of one token if `\HyPsd@CheckCatcodes` is called.

Because of internal local assignments and tabulars group braces are used.

```

619 \let\HyPsd@SPACEOPTI\relax
620 {%
621 \let\HyPsd@String\@empty
622 \expandafter\HyPsd@CheckCatcodes#1\HyPsd@End
623 \global\let#1\HyPsd@String
624 }%
625 \expandafter\HyPsd@RemoveMask\expandafter
626 |\expandafter\@empty#1\HyPsd@End#1%

```

`\HyPsd@CheckCatcodes` should no have removed the tokens with catcode 3, 4, 7, and 8. Because a parameter token (6) would cause to many errors before, there should now be only tokens with catcodes 11 or 12. So I think there is no need for a safety step like:

```
\xdef#1{\expandafter\strip@prefix\meaning#1}%
```

Looking for wrong glyphs. The case that glyphs aren't defined in the PD1 encoding is caught above in such a way, that the glyph name and a marker is inserted into the string. Now we can safely scan the string for this marker and provide a descriptive warning.

```

627 \expandafter\HyPsd@Subst\expandafter{\HyPsd@GLYPHERR}{\relax}#1%
628 \let\HyPsd@String\@empty
629 \expandafter\HyPsd@GlyphProcess#1\relax\@empty
630 \global\let#1\HyPsd@String

```

Backslash. The double backslash disturbs parsing octal sequences, for example in an string like `abc\\051` the sequence `\051` is detected although the second `\` belongs to the first backslash.

```
631 \HyPsd@StringSubst{\}{\textbackslash}#1%
```

Spaces. All spaces have already the form `\040`. The last postprocessing step will be an optimizing of the spaces, so we already introduce already the necessary command `\HyPsd@SPACEOPTI`. But first it is defined to be `\relax` in order to prevent a too early expansion by an `\edef`. Secondly a `\relax` serves as a marker for a token that is detected by `\xspace`.

The code of `frenchb.ldf` can produce an additional space before `\guillemotright`, because `\lastskip` and `\unskip` do not work. Therefore it is removed here.

```
632 \ifHy@unicode
633 \expandafter\HyPsd@StringSubst\csname 80\040\endcsname
634 \HyPsd@SPACEOPTI#1%
635 \edef\Hy@temp@A{\HyPsd@SPACEOPTI\HyPsd@SPACEOPTI\80\273}%
636 \expandafter\HyPsd@Subst\expandafter{\Hy@temp@A}%
637 {\HyPsd@SPACEOPTI\80\273}#1%
638 \else
639 \HyPsd@StringSubst{\040}\HyPsd@SPACEOPTI#1%
640 \expandafter\HyPsd@Subst\expandafter{%
641 \expandafter\HyPsd@SPACEOPTI\expandafter\HyPsd@SPACEOPTI
642 \string\273}\HyPsd@SPACEOPTI\273}#1%
643 \fi
```

Right parenthesis. Also `\xspace` detects a right parenthesis. For the `\xspace` support and the following parenthesis check the different parenthesis notations `)`, `\)`, and `\051` are converted to one type `\)` and before `\HyPsd@empty` with the meaning of `\relax` is introduced for `\xspace`. By redefining to `\@empty \HyPsd@empty` can easily removed later.

```
644 \ifHy@unicode
645 \HyPsd@StringSubst{\)}{\80\051}#1%
646 \HyPsd@Subst){\80\051}#1%
647 \let\HyPsd@empty\relax
648 \expandafter\HyPsd@StringSubst\csname 80\051\endcsname
649 {\HyPsd@empty\80\051}#1%
650 \else
651 \HyPsd@StringSubst{\)}{\051}#1%
652 \HyPsd@Subst){\051}#1%
653 \let\HyPsd@empty\relax
654 \HyPsd@StringSubst{\051}\HyPsd@empty\string\)}#1%
655 \fi
```

Support for package `xspace`. `\xspace` looks for the next token and decides if it expands to a space or not. Following tokens prevent its transformation to a space: Beginning and end of group, handled above by replacing by an italic correction, several punctuation marks, a closing parentheses, and several spaces.

Without package `xspace` there are tokens with catcode 11 and 12, `\HyPsd@empty` and `\HyPsd@SPACEOPTI`. With package `xspace` marker for the italic correction `\/` and `\xspace` come with. In the package `xspace` case the two markers are replaced by commands and an `\edef` performs the `\xspace` processing.

In the opposite of the original `\xspace` `\HyPsd@xspace` uses an argument instead of a `\futurelet`, so we have to provide such an argument, if `\HyPsd@xspace` comes last.

Because `\HyPsd@Subst` with several equal tokens (`--`) needs a safe last token, in both cases the string gets an additional `\HyPsd@empty`.

```

656 \expandafter\HyPsd@Subst\expandafter{\}\HyPsd@empty#1%
657 \ltx@ifundefined{@xspace}{%
658 }{%
659 \let\HyPsd@xspace\relax
660 \expandafter\HyPsd@Subst\expandafter
661 {\HyPsd@XSPACE}\HyPsd@xspace#1%
662 \let\HyPsd@xspace\HyPsd@doxspace
663 }%
664 \xdef#1{#1\HyPsd@empty}%

```

Ligatures. \TeX forms ligatures in its stomach, but the PDF strings are treated only by \TeX 's mouth. The PDFDocEncoding contains some ligatures, but the current version 3 of the AcrobatReader lacks the `fi` and `fl` glyphs, and the Linux version lacks the `emdash` and `endash` glyphs. So the necessary code is provided here, but currently disabled, hoping that version 4 of the AcrobatReader is better. To break the ligatures the user can use an empty group, because it leads to an insertion of an `\HyPsd@empty`. If this ligature code will be enabled some day, then the italic correction should also break the ligatures. Currently this occurs only, if package `xspace` is loaded.

Since newer AcrobatReader versions now show the `en-` and `emdash` in a correct way (AR7/Linux, AR8/Linux), the substitution code for them is enabled starting with version 6.781.

```

665 \HyPsd@Subst{---}\textemdash#1%
666 \HyPsd@Subst{--}\textendash#1%
667 % \HyPsd@Subst{fi}\textfi#1%
668 % \HyPsd@Subst{fl}\textfl#1%
669 \HyPsd@Subst{!'}\textexclamdown#1%
670 \HyPsd@Subst{?'}\textquestiondown#1%

```

With the next `\edef` we get rid of the token `\HyPsd@empty`.

```

671 \let\HyPsd@empty\@empty

```

Left parentheses. Left parentheses are now converted to safe forms to avoid problems with unmatched ones (`\(` with PDFDocEncoding, the octal sequence with Unicode).

An optimization is possible. Matched parentheses can be replaced by a `()` pair. But this code is removed to save \TeX memory and time.

```

672 \ifHy@unicode
673 \HyPsd@StringSubst{\textparenleft#1%
674 \HyPsd@Subst(\textparenleft#1%
675 \else
676 \HyPsd@StringSubst{\{050\}#1%
677 \HyPsd@Subst(\{050\}#1%
678 \HyPsd@StringSubst{\050}\string\{)#1%
679 \fi

```

Optimizing spaces. Spaces are often used, but they have a very long form `\040`. They are converted back to real spaces, but not all, so that no space follows after another. In the bookmark case several spaces are written to the `.out` file, but if the entries are read back, several spaces are merged to a single one.

With Unicode the spaces are replaced by their octal sequences.

```

680 \ifHy@unicode
681 \edef\HyPsd@SPACEOPTI{\80\040}%
682 \else

```

```

683 \let\HyPsd@SPACEOPTI\HyPsd@spaceopti
684 \fi

817 }%

```

6.3.3 PD1 encoding

The PD1 encoding implements the PDFDocEncoding for use with L^AT_EX 2_ε's NFSS. Because the informational strings are not set by T_EX's typesetting mechanism but for interpreting by the PDF reader, the glyphs of the PD1 encoding are implemented to be safely written to a file (PDF output file, .out file).

The PD1 encoding can be specified as an option of the 'fontenc' package or loaded here. It does not matter what font family is selected, as T_EX does not process it anyway. So use CM.

```

818 \@ifundefined{T@PD1}{%
819     \input{pd1enc.def}%
820     \HyLinguex@Restore
821 }{}
822 \DeclareFontFamily{PD1}{pdf}{}
823 \DeclareFontShape{PD1}{pdf}{m}{n}{ <-> cmr10 }{}
824 \DeclareFontSubstitution{PD1}{pdf}{m}{n}

```

6.3.4 PU encoding

The PU encoding implements the Unicode encoding for use with L^AT_EX's NFSS. Because of large memory requirements the encoding file for Unicode support is only loaded, if option `unicode` is specified as package option.

`\HyPsd@InitUnicode` Because the file `puenc.def` takes a lot of memory, the loading is defined in the macro `\HyPsd@InitUnicode` called by the package option `unicode`.

```
825 \def\HyPsd@InitUnicode{%
826   \ifundefined{T@PU}{%
827     \input{puenc.def}%
828     \HyLinguex@Restore
829   }{%
830     \DeclareFontFamily{PU}{pdf}{}%
831     \DeclareFontShape{PU}{pdf}{m}{n}{<-> cmr10 }{}%
832     \DeclareFontSubstitution{PU}{pdf}{m}{n}%
833     \let\HyPsd@InitUnicode\relax
834 }
```

6.4 Additional user commands

6.4.1 `\texorpdfstring`

`\texorpdfstring` While expanding the string in `\pdfstringdef` the switch `\ifHy@pdfstring` is set. This is used by the full expandable macro `\texorpdfstring`. It expects two arguments, the first contains the string that will be set and processed by T_EX's stomach, the second contains the replacement for PDF strings.

```
835 \def\texorpdfstring{%
836   \ifHy@pdfstring
837     \expandafter\@secondoftwo
838   \else
839     \expandafter\@firstoftwo
840   \fi
841 }
```

6.4.2 Hooks for `\pdfstringdef`

`\pdfstringdefPreHook` Default definition of the hooks for `\pdfstringdef`. The construct `\@ifundefined` with `\pdfstringdefPostHook` `\let` is a little bit faster than `\providecommand`.

```
842 \@ifundefined{pdfstringdefPreHook}{%
843   \let\pdfstringdefPreHook\@empty
844 }{}
845 \@ifundefined{pdfstringdefPostHook}{%
846   \let\pdfstringdefPostHook\@gobble
847 }{}
```

`\pdfstringdefDisableCommands` In `\pdfstringdefPreHook` the user can add code that is executed before the string, that have to be converted by `\pdfstringdef`, is expanded. So replacements for problematic macros can be given. The code in `\pdfstringdefPreHook` should not be replaced perhaps by an `\renewcommand`, because a previous meaning gets lost.

Macro `\pdfstringdefDisableCommands` avoids this, because it reuses the old meaning of the hook and appends the new code to `\pdfstringdefPreHook`, e.g.:

```
\pdfstringdefDisableCommands{%
  \let~\textasciitilde
  \def\url{\pdfstringdefWarn\url}%
  \let\textcolor\@gobble
```

```
}%
```

In the argument of `\pdfstringdefDisableCommands` the character `@` can be used in command names. So it is easy to use useful L^AT_EX commands like `@gobble` or `@firstofone`.

```
848 \def\pdfstringdefDisableCommands{%
849   \begingroup
850   \makeatletter
851   \HyPsd@DisableCommands
852 }
```

`\HyPsd@DisableCommands`

```
853 \long\def\HyPsd@DisableCommands#1{%
854   \toks0=\expandafter{\pdfstringdefPreHook}%
855   \toks1={#1}%
856   \xdef\pdfstringdefPreHook{\the\toks0 \the\toks1}%
857 \endgroup
858 }
```

`\pdfstringdefWarn` The purpose of `\pdfstringdefWarn` is to produce a warning message, so the user can see, that something can go wrong with the conversion to PDF strings.

The prefix `<>-` is added to the token. `\noexpand` protects the probably undefined one during the first expansion step. Then `\HyPsd@CheckCatcodes` can detect the not allowed token, `\HyPsd@CatcodeWarning` prints a warning message, after `\HyPsd@RemovePrefix` has removed the prefix.

`\pdfstringdefWarn` is intended for document authors or package writers, examples for use can be seen in the definition of `\HyPsd@ifnextchar` or `\HyPsd@protected@testopt`.

```
859 \def\pdfstringdefWarn#1{%
860   \expandafter\noexpand\csname<>-string#1\endcsname
861 }
```

6.5 Help macros for expansion

6.5.1 `\ignorespaces`

`\HyPsd@ignorespaces` With the help of a trick using `\romannumeral` the effect of `\ignorespaces` can be simulated a little. In a special case using an alphabetic constant `\romannumeral` eats an optional space. If the constant is zero, then the `\romannumeral` expression vanishes. The following macro uses this trick twice, thus `\HyPsd@ignorespaces` eats up to two following spaces.

```
862 \begingroup
863   \catcode0=12 %
864   \def\x{\endgroup

6.5.2 Babel languages

Since version 2008/03/16 v3.8j babel uses inside `\AtBeginDocument`:

```
\pdfstringdefDisableCommands{%
  \languageshorthands{system}%
}
```

As consequence the shorthands are shown in the bookmarks, not its result. Therefore `\languageshorthands` is disabled before the user hook. If there is a need to use the command, then `\HyOrg@languageshorthands` can be used inside `\pdfstringdefDisableCommands`.

```

6.5.4 CJK bookmarks

\HyPsd@CJKhook Some internal commands of package cjk are redefined to avoid error messages. For a rudimental support of CJK bookmarks the active characters are redefined so that they print themselves.

After preprocessing of Big5 encoded data the following string for a double-byte character is emitted:

```
^^7f<arg1>^^7f<arg2>^^7f
```

<arg1> is the first byte in the range (always > 0x80); <arg2> is the second byte in decimal notation ($\geq 0x40$).

```

6.5.6 \@inmathwarn-Patch

`\HyPsd@inmathwarn` The patch of `\@inmathwarn` is needed to get rid of the infinite error loop with glyphs of other encodings (see the explanation above). Potentially the patch is dangerous, if the code in `ltoutenc.dtx` changes. Checked with $\text{\LaTeX 2}_{\epsilon}$ versions [1998/06/01] and [1998/12/01]. I expect that versions below [1995/12/01] don't work.

To understand the patch easier, the original code of `\@current@cmd` and `\@changed@cmd` follows ($\text{\LaTeX 2}_{\epsilon}$ release [1998/12/01]). In the normal case `\pdfstringdef` is executed in a context where `\protect` has the meaning of `\@typesetprotect (= \relax)`.

```

\def\@current@cmd#1{%
  \ifx\protect\@typeset@protect
    \@inmathwarn#1%
  \else
    \noexpand#1\expandafter\@gobble
  \fi}
\def\@changed@cmd#1#2{%
  \ifx\protect\@typeset@protect
    \@inmathwarn#1%
    \expandafter\ifx\csname\cf@encoding\string#1\endcsname\relax
      \expandafter\ifx\csname ?\string#1\endcsname\relax
        \expandafter\def\csname ?\string#1\endcsname{%
          \TextSymbolUnavailable#1%
        }%
      \fi
    \global\expandafter\let
      \csname\cf@encoding\string#1\expandafter\endcsname

```

```

\csname ?\string#1\endcsname
\fi
\csname\cf@encoding\string#1%
\expandafter\endcsname
\else
\noexpand#1%
\fi}
\gdef\TextSymbolUnavailable#1{%
\@latex@error{%

1503 \def\HyPsd@add@accent#1#2{%
1504 \HyPsd@GLYPHERR\expandafter\@gobble\string#1+\string#2>%
1505 #2%
1506 }%

```

6.5.7 Unexpandable spaces

\HyPsd@LetUnexpandableSpace In \HyPsd@@@ProtectSpaces the space tokens are replaced by not expandable commands, that work like spaces:

- So they can caught by undelimited arguments.
- And they work in number, dimen, and skip assignments.

These properties are used in \HyPsd@CheckCatcodes.

```

1507 \def\HyPsd@LetUnexpandableSpace#1{%
1508 \expandafter\futurelet\expandafter#1\expandafter\@gobble\space\relax
1509 }

```

\HyPsd@UnexpandableSpace \HyPsd@UnexpandableSpace is used in \HyPsd@@@ProtectSpaces. In \yPsd@@@ProtectSpaces the space tokens are replaced by unexpandable commands \HyPsd@UnexpandableSpace, but that have the effect of spaces.

```

1510 \HyPsd@LetUnexpandableSpace\HyPsd@UnexpandableSpace

```

6.5.8 Marker for commands

`\HyPsd@XSPACE` Some commands and informations cannot be utilized before the string expansion and the checking process. Command names are filtered out, so we need another way to transport the information: An unusual `#` with catcode 12 marks the beginning of the extra information.

```
1511 \edef\HyPsd@XSPACE{\string#\string X}
1512 \edef\HyPsd@ITALCORR{\string#\string I}
1513 \edef\HyPsd@GLYPHERR{\string#\string G}
```

6.5.9 `\hspace fix`

`\HyPsd@hspace`

```
1514 \def\HyPsd@hspace#1{\HyPsd@@hspace#1*\END}
```

`\HyPsd@@hspace` `\HyPsd@@hspace` checks whether `\hspace` is called in its star form.

```
1515 \def\HyPsd@@hspace#1*#2\END{%
1516   \ifx\#2\%
1517     \HyPsd@hspacetest{#1}%
1518   \else
1519     \expandafter\HyPsd@hspacetest
1520   \fi
1521 }
```

`\HyPsd@hspacetest` `\HyPsd@hspacetest` replaces the `\hspace` by a space, if the length is greater than zero.

```
1522 \def\HyPsd@hspacetest#1{\ifdim#1>\z@\space\fi}
```

1625   }%
1626 }

```

6.5.12 Redefining the defining commands

Definitions aren't allowed, because they aren't executed in an only expanding context. So the command to be defined isn't defined and can perhaps be undefined. This would cause TeX to stop with an error message. With a deep trick it is possible to define commands in such a context: `\csname` does the job, it defines the command to be `\relax`, if it has no meaning.

Active characters cannot be defined with this trick. It is possible to define all undefined active characters (perhaps that they have the meaning of `\relax`). To avoid side effects this should be done in `\pdfstringdef` shortly before the `\xdef` job. But checking and defining all possible active characters of the full range (0 until 255) would take a while. `\pdfstringdef` is slow enough, so this isn't done.

`\HyPsd@DefCommand` and `\HyPsd@LetCommand` expands to the commands `\<def>-command` and `\<let>-command` with the meaning of `\def` and `\let`. So it is detected by `\HyPsd@CheckCatcodes` and the command name `\<def>-command` or `\<let>-command` should indicate a forbidden definition command.

The command to be defined is converted to a string and back to a command name with the help of `\csname`. If the command is already defined, `\noexpand` prevents a further expansion, even though the command would expand to legal stuff. If the command doesn't have the meaning of `\relax`, `\HyPsd@CheckCatcodes` will produce a warning. (The command itself can be legal, but the warning is legitimate because of the position after a defining command.)

The difference between `\HyPsd@DefCommand` and `\HyPsd@LetCommand` is that the first one also cancels this argument, the parameter and definition text. The right side of the `\let` commands cannot be canceled with an undelimited parameter because of a possible space token after `\futurelet`.

To avoid unbalanced `\if...` tokens, the cases `\let\if...\iftrue` and `\let\if...\iffalse` are checked and ignored.

```

\HyPsd@DefCommand

1662   }%
1663 }

```

6.5.13 \ifnextchar

`\HyPsd@ifnextchar` In `\pdfstringdef \@ifnextchar` is disabled via a `\let` command to save time. First a warning message is given, then the three arguments are canceled. `\@ifnextchar` cannot work in a correct manner, because it uses `\futurelet`, but this is a stomach feature, that doesn't work in an expanding context. There are several variants of `\@ifnextchar`:

- `\@ifnextchar`
- `\kernel@ifnextchar`
- `\new@ifnextchar` from package `amsgen.sty` (bug report latex/3662).

```

1664 \def\HyPsd@ifnextchar#1{%
1665   \pdfstringdefWarn#1%
1666   \expandafter\@gobbletwo\@gobble
1667 }

```

6.5.14 \@protected@testoptifnextchar

`\HyPsd@protected@testopt` Macros with optional arguments doesn't work properly, because they call `\@ifnextchar` to detect the optional argument (see the explanation of `\HyPsd@ifnextchar`). But a warning, that `\@ifnextchar` doesn't work, doesn't help the user very much. Therefore `\@protected@testopt` is also disabled, because its first argument is the problematic macro with the optional argument and it is called before `\@ifnextchar`.

```

1668 \def\HyPsd@protected@testopt#1{%
1669   \pdfstringdefWarn#1%
1670   \@gobbletwo
1671 }

```

6.6 Help macros for postprocessing

6.6.1 Generic warning.

`\HyPsd@Warning` For several reasons `\space` is masked and does not have its normal meaning. But it is used in warning messages, so it is redefined locally:

```

1672 \def\HyPsd@Warning#1{%
1673   \begingroup
1674     \def\space{ }%
1675     \Hy@Warning{#1}%
1676   \endgroup
1677 }

```

6.6.2 Protecting spaces

```

1678 \RequirePackage{etexcmds}[2007/09/09]
1679 \ifetex@unexpanded
1680   \expandafter\@secondoftwo
1681 \else
1682   \expandafter\@firstoftwo
1683 \fi
1684 {%

```

`\HyPsd@ProtectSpaces` `\HyPsd@ProtectSpaces` calls with the expanded string `\HyPsd@@ProtectSpacesFi`. The expanded string is protected by `|` at the beginning and end of the expanded string. Because of this there can be no group at the beginning or end of the string and grouping characters are not removed by the call of `\HyPsd@@ProtectSpacesFi`.

```

1685   \def\HyPsd@ProtectSpaces#1{%
1686     \iftrue
1687       \expandafter\HyPsd@@ProtectSpacesFi
1688       \expandafter|\expandafter\@empty#1| \HyPsd@End#1%
1689     \fi
1690   }%

```

`\HyPsd@@ProtectSpacesFi` The string can contain command tokens, so it is better to use an `\def` instead of an `\edef`.

```

1691   \def\HyPsd@@ProtectSpacesFi#1 #2\HyPsd@End#3\fi{%
1692     \fi
1693     \ifx\scrollmode#2\scrollmode
1694       \HyPsd@RemoveMask#1\HyPsd@End#3%
1695     \else
1696       \gdef#3{#1\HyPsd@UnexpandableSpace#2}%
1697       \expandafter\HyPsd@@ProtectSpacesFi#3\HyPsd@End#3%
1698     \fi
1699   }%

```

Remove mask.

`\HyPsd@RemoveMask` `\HyPsd@RemoveMask` removes the protecting `|`. It is used by `\HyPsd@@ProtectSpacesFi` and by the code in `\pdfstringdef` that removes the grouping characters.

```

1700   \def\HyPsd@RemoveMask|#1|\HyPsd@End#2{%
1701     \toks@ \expandafter{#1}%
1702     \xdef#2{\the\toks@}%
1703   }%

1704 }{%
1705   \let\HyPsd@fi\fi
1706   \def\HyPsd@ProtectSpaces#1{%
1707     \xdef#1{%
1708       \iftrue
1709         \expandafter\HyPsd@@ProtectSpacesFi
1710         \expandafter|\expandafter\@empty#1| %
1711       \HyPsd@fi
1712     }%
1713     \expandafter\HyPsd@RemoveMask#1\HyPsd@End#1%
1714   }%
1715   \def\HyPsd@@ProtectSpacesFi#1 #2\HyPsd@fi{%
1716     \fi
1717     \etex@unexpanded{#1}%
1718     \ifx\scrollmode#2\scrollmode
1719     \else
1720       \HyPsd@@ProtectSpacesFi\HyPsd@UnexpandableSpace#2%

```

```

1721 \HyPsd@fi
1722 }%
1723 \def\HyPsd@RemoveMask|#1|\HyPsd@End#2{%
1724 \xdef#2{\etex@unexpanded\expandafter{#1}}%
1725 }%
1726 }

```

6.6.3 Remove grouping braces

`\HyPsd@RemoveBraces` #1 contains the expanded string, the result will be locally written in command `\HyPsd@String`.

```

1727 \def\HyPsd@RemoveBraces#1{%
1728 \ifx\scrollmode#1\scrollmode
1729 \else
1730 \HyPsd@@RemoveBracesFi#1\HyPsd@End{#1}%
1731 \fi
1732 }

```

`\HyPsd@@RemoveBraces` `\HyPsd@@RemoveBraces` is called with the expanded string, the end marked by `\HyPsd@End`, the expanded string again, but enclosed in braces and the string command. The first expanded string is scanned by the parameter text #1#2. By a comparison with the original form in #3 we can decide whether #1 is a single token or a group. To avoid the case that #2 is a group, the string is extended by a | before.

While removing the grouping braces an italic correction marker is inserted for supporting package `xspace` and letting ligatures broken.

Because the string is already expanded, the `\if` commands should disappeared. So we can move some parts out of the argument of `\Hy@ReturnAfterFi`.

```

1733 \def\HyPsd@@RemoveBracesFi#1#2\HyPsd@End#3\fi{%
1734 \fi
1735 \def\Hy@temp@A{#1#2}%
1736 \def\Hy@temp@B{#3}%
1737 \ifx\Hy@temp@A\Hy@temp@B
1738 \expandafter\def\expandafter\HyPsd@String\expandafter{%
1739 \HyPsd@String#1%
1740 }%
1741 \ifx\scrollmode#2\scrollmode
1742 \else
1743 \Hy@ReturnAfterFiFiEnd{%
1744 \HyPsd@RemoveBraces{#2}%
1745 }%
1746 \fi
1747 \else
1748 \def\Hy@temp@A{#1}%
1749 \HyPsd@AppendItalcrr\HyPsd@String
1750 \ifx\Hy@temp@A\@empty
1751 \Hy@ReturnAfterElseFiFiEnd{%
1752 \HyPsd@RemoveBraces{#2}%
1753 }%
1754 \else
1755 \HyPsd@ProtectSpaces\Hy@temp@A
1756 \HyPsd@AppendItalcrr\Hy@temp@A
1757 \Hy@ReturnAfterFiFiEnd{%
1758 \expandafter\HyPsd@RemoveBraces\expandafter
1759 {\Hy@temp@A#2}%
1760 }%
1761 \fi
1762 \fi

```

```

1763 \Hy@ReturnEnd
1764 }

```

\HyPsd@AppendItalcrr The string can contain commands yet, so it is better to use \def instead of a shorter \edef.
\HyPsd@@AppendItalcrr The two help macros limit the count of \expandafter.

```

1765 \def\HyPsd@AppendItalcrr#1{%
1766 \expandafter\HyPsd@@AppendItalcrr\expandafter{\/#1}%
1767 }
1768 \def\HyPsd@@AppendItalcrr#1#2{%
1769 \expandafter\def\expandafter#2\expandafter{#2#1}%
1770 }

```

6.6.4 Catcode check

Check catcodes.

\HyPsd@CheckCatcodes Because \ifcat expands its arguments, this is prevented by \noexpand. In case of command tokens and active characters \ifcat now sees a \relax. After protecting spaces and removing braces #1 should be a single token, no group of several tokens, nor an empty group. (So the \expandafter\relax between \ifcat and \noexpand is only for safety and it should be possible to remove it.)

\protect and \relax should be removed silently. But it is too dangerous and breaks some code giving them the meaning of \@empty. So commands with the meaning of \protect are removed here. (\protect should have the meaning of \@typeset@protect that is equal to \relax).

```

1771 \def\HyPsd@CheckCatcodes#1#2\HyPsd@End{%
1772 \global\let\HyPsd@Rest\relax

6.6.9 Support for UTF-8 input encoding

After `\usepackage[utf8]{inputenc}` there are macros that expect the UTF-8 octets as arguments. Therefore we can calculate the PDF octal sequences directly. Because the PDF format is limited to UCS-2, conversion macros are needed for UTF-8 sequences with two and three octets only.

This calculation must be done in an expandable context, so we use `eTeX` here for performance reasons. Unhappily the results of divisions are rounded. Thus a circumvention via `\dimexpr` is used, e.g.:

```

\numexpr 123/4\relax is replaced by
\number\dimexpr.25\dimexpr 123sp\relax\relax

2126 \begingroup\expandafter\expandafter\expandafter\endgroup
2127 \expandafter\ifx\csname numexpr\endcsname\relax

8 Help macros for links

Anchors get created on the baseline of where they occur. If an XYZ PDF view is set, this means that the link places the top of the screen *on the baseline* of the target. If this is an equation, for instance, it means that you cannot see anything. Some links, of course, are created at the start of environments, and so it works. To allow for this, anchors are raised,

where possible, by some small amount. This defaults to `\baselineskip`, but users can set it to something else in two ways (thanks to Heiko Oberdiek for suggesting this):

1. Redefine `\HyperRaiseLinkDefault` to be eg the height of a `\strut`
2. Redefine `\HyperRaiseLinkHook` to do something complicated; it must give a value to `\HyperRaiseLinkLength`, which is what actually gets used

```
2330 \let\HyperRaiseLinkHook\@empty
2331 \def\HyperRaiseLinkDefault{\baselineskip}
```

`\HyperRaiseLinkHook` allows the user to reassign `\HyperRaiseLinkLength`.

```

```

Next commented section for Russian is provided by Olga Lapko.

Next follow the checked reference names with commented variants and explanations. All they are abbreviated and they won't create a grammatical problems in the *middle* of sentences.

The most weak points in these abbreviations are the `\equationautorefname`, `\theoremautorefname` and the `\FancyVerbLineautorefname`. But those three, and also the `\footnoteautorefname` are not *too* often referenced. Another rather weak point is the `\appendixautorefname`.

```

3032 \def\HyLang@russian{%

```

The abbreviated reference to the equation: it is not for “the good face of the book”, but maybe it will be better to get the company for the `\theoremautorefname`?

```

3033 \def\equationautorefname{\cyr\cyrv\cyrery\cyr.}%

```

The name of the equation reference has common form for both nominative and accusative but changes in other forms, like “of `\autoref{auto}`” etc. The full name must follow full

name of the \theoremautorefname.

```
3034 % \def\equationautorefname{%  
3035 %   \cyr\cyrv\cyrry\cyrr\cyra\cyrrzh\cyre\cyrn\cyri\cyre  
3036 % }%
```

The variant of footnote has abbreviation form of the synonym of the word “footnote”. This variant of abbreviated synonym has alternative status (maybe obsolete?).

```
3037 \def\footnoteautorefname{%  
3038   \cyr\cyrp\cyro\cyrd\cyrs\cyrt\cyrr.\ \cyrp\cyrr\cyri\cyrm.%  
3039 }%
```

Commented form of the full synonym for “footnote”. It has common form for both nominative and accusative but changes in other forms, like “of \autoref{auto}”

```
3040 % \def\footnoteautorefname{%  
3041 %   \cyr\cyrp\cyro\cyrd\cyrs\cyrt\cyrr\cyro\cyrrzh\cyrn\cyro\cyre\ %  
3042 %   \cyrp\cyrr\cyri\cyrm\cyre\cyrrzh\cyra\cyrn\cyri\cyre  
3043 % }%
```

Commented forms of the “footnote”: have different forms, the same is for the nominative and accusative. (The others needed?)

```
3044 % \def\Nomfootnoteautorefname{\cyr\cyrs\cyrn\cyro\cyrs\cyrk\cyra}%  
3045 % \def\Accfootnoteautorefname{\cyr\cyrs\cyrn\cyro\cyrs\cyrk\cyru}%
```

Name of the list item, can be confused with the paragraph reference name, but reader could understand meaning from context(?). Commented variant has common form for both nominative and accusative but changes in other forms, like “of \autoref{auto}” etc.

```
3046 \def\itemautorefname{\cyr\cyrp.}%  
3047 % \def\itemautorefname{\cyr\cyrp\cyru\cyrn\cyrk\cyrt}%
```

Names of the figure and table have stable (standard) abbreviation forms. No problem in the middle of sentence.

```
3048 \def\figureautorefname{\cyr\cyrr\cyri\cyrs.}%  
3049 \def\tableautorefname{\cyr\cyrt\cyra\cyrb\cyrl.}%
```

Names of the part, chapter, section(s) have stable (standard) abbreviation forms. No problem in the middle of sentence.

```
3050 \def\partautorefname{\cyr\cyrrh.}%  
3051 \def\chapterautorefname{\cyr\cyrg\cyrl.}%  
3052 \def\sectionautorefname{\cyr\cyrr\cyra\cyrrzh\cyrd.}%
```

Name of the appendix can use this abbreviation, but it is not standard for books, i.e., not for “the good face of the book”. Commented variant has common form for both nominative and accusative but changes in other forms, like “of \autoref{auto}” etc.

```
3053 \def\appendixautorefname{\cyr\cyrp\cyrr\cyri\cyrl.}%  
3054 % \def\appendixautorefname{%  
3055 %   \cyr\cyrp\cyrr\cyri\cyrl\cyro\cyrrzh\cyre\cyrn\cyri\cyre  
3056 % }%
```

The sectioning command have stable (almost standard) and common abbreviation form for all levels (the meaning of these references visible from the section number). No problem.

```
3057 \def\subsectionautorefname{\cyr\cyrr\cyra\cyrrzh\cyrd.}%  
3058 \def\subsubsectionautorefname{\cyr\cyrr\cyra\cyrrzh\cyrd.}%
```

The names of references to paragraphs also have stable (almost standard) and common abbreviation form for all levels (the meaning of these references is visible from the section number). No problem in the middle of sentence.

```
3059 \def\paragraphautorefname{\cyr\cyrp.}%  
3060 \def\subparagraphautorefname{\cyr\cyrp.}%
```

Commented variant can be used in books but since it has common form for both nominative and accusative but it changes in other forms, like “of \autoref{auto}” etc.

```
3061 % \def\paragraphautorefname{\cyr\cyrp\cyru\cyrn\cyrk\cyrt}%
3062 % \def\subparagraphautorefname{\cyr\cyrp\cyru\cyrn\cyrk\cyrt}%
```

The name of verbatim line. Here could be a standard of the abbreviation (used very rare). But the author preprint publications (which have not any editor or corrector) can use this abbreviation for the page reference. So the meaning of the line reference can be read as reference to the page.

```
3063 \def\FancyVerbLineautorefname{\cyr\cyrs\cyrt\cyrr.}%
```

Commented names of the “verbatim line”: have different forms, also the nominative and accusative.

```

The depth of the outlines is controlled by option `bookmarksdepth`. The option acts globally and distinguishes three cases:

- `bookmarksdepth`: Without value `hyperref` uses counter `tocdepth` (compatible behaviour and default).
- `bookmarksdepth=<number>`: the depth is set to `<number>`.

- `bookmarksdepth=<name>`: The `<name>` must not start with a number or minus sign. It is a document division name (part, chapter, section, ...). Internally the value of macro `\toclevel@<name>` is used.

```

The value of the `bordercolor` options are not processed by the color package. Therefore the value consists of space separated rgb numbers in the range 0 until 1.

Package xcolor provides \XC@bordercolor since version 1.1. If the two spaces in the color specification are missing, then the value is processed as color specification from package xcolor by using \XC@bordercolor (since xcolor 2004/05/09 v1.11, versions 2005/03/24 v2.02 until 2006/11/28 v2.10 do not work because of a bug that is fixed in 2007/01/21 v2.11).

3816 \Hy@MaybeStopNow

```

To add flexibility, we will not use the ordinary processing of package options, but put them through the *keyval* package. This section was written by David Carlisle.

Package *kvoptions* is used for processing options that are given as key value pairs. The package provides \ProcessKeyvalOptions, formerly known as \ProcessOptionsWithKV.

```

3817 \RequirePackage{kvoptions}[2009/07/21]
3818 \SetupKeyvalOptions{family=Hyp}
3819 \DeclareLocalOptions{%
3820   a4paper,a5paper,b5paper,letterpaper,legalpaper,executivepaper%
3821 }

```

Add option `tex4ht` if package `tex4ht` is loaded.

```

3822 \@ifpackageloaded{tex4ht}{%
3823   \@ifpackagewith{hyperref}{tex4ht}{-}{-}%
3824   \PassOptionsToPackage{tex4ht}{hyperref}%
3825 }%
3826 }{-}

```

```

3827 \let\ReadBookmarks\relax
3828 \ProcessKeyvalOptions{Hyp}

After processing options.

16 User hypertext macros

We need to normalise all user commands taking a URL argument; Within the argument the following special definitions apply: \#, \%, ~ produce #, %, ~ respectively. for consistency \~ produces ~ as well. At the *top level only* ie not within the argument of another command, you can use # and % unescaped, to produce themselves. even if, say, # is entered as # it will be converted to \# so it does not die if written to an aux file etc. \# will write as # locally while making \specials.

\hyperref is more complicated, as it includes the concept of a category of link, used to make the name. This is not really used in this package. \hyperdef sets up an anchor in the same way. They each have three parameters of category, linkname, and marked text, and \hyperref also has a first parameter of URL. If there is an optional first parameter to \hyperdef, it is the name of a \LaTeX label which can be used in a short form of \hyperref later, to avoid remembering the name and category.

17 Underlying basic hypertext macros

Links have an optional type, a filename (possibly a URL), an internal name, and some marked text. (Caution: the internal name may contain babel shorthand characters.) If the second parameter is empty, it's an internal link, otherwise we need to open another file or a URL. A link start has a type, and a URL.

```

4570 \def\hyper@link{\let\Hy@reserved@a\relax
4571   \@ifnextchar[{\hyper@link@}{\hyper@link@[link]}}%
4572 }

4593     \fi
4594   }%
4595   \x
4596 }

```

The problem here is that the first (URL) parameter may be a local file: reference (in which case some browsers treat it differently) or a genuine URL, in which case we'll have to activate a real Web browser. Note that a simple name is also a URL, as that is interpreted as a relative file name. We have to worry about # signs in a local file as well.

```

4597 \def\hyper@readexternallink#1\{#2#3#4{%
4598   \begingroup
4599     \let\relax\relax
4600     \expandafter\endgroup
4601     \expandafter\@hyper@@readexternallink#1\{#2}{#3}{#4}%

```

Parameters are:

1. The URL or file name
2. The type

3. The internal name

4. The link string

We need to get the 1st parameter properly expanded, so we delimit the arguments rather than passing it inside a group.

```
4604 \@hyper@readexternallink{#2}{#3}{#4}#1::\{#1}%  
4605 }
```

Now (potentially), we are passed: 1) The link type 2) The internal name, 3) the link string, 4) the URL type (http, mailto, file etc), 5) the URL details 6) anything after a real : in the URL 7) the whole URL again

```
4606 \def\@pdftempwordfile{file}%  
4607 \def\@pdftempwordrun{run}%  
4608 \def\@hyper@readexternallink#1#2#3#4:#5:#6\#7{%
```

If there are no colons at all (#6 is blank), its a local file; if the URL type (#4) is blank, its probably a Mac filename, so treat it like a file: URL. The only flaw is if its a relative Mac path, with several colon-separated elements — then we lose. Such names must be prefixed with an explicit dvi:

```
4609 \ifx\#6\%  
4610 \@hyper@linkfile file:#7\{#3}{#2}{#7}%  
4611 \else  
4612 \ifx\#4\%  
4613 \@hyper@linkfile file:#7\{#3}{#2}{#7}%  
4614 \else
```

If the URL type is ‘file’, pass it for local opening

```
4615 \def\@pdftempa{#4}%  
4616 \ifx\@pdftempa\@pdftempwordfile  
4617 \@hyper@linkfile#7\{#3}{#2}{#7}%  
4618 \else
```

if it starts ‘run:’, its to launch an application.

```
4619 \ifx\@pdftempa\@pdftempwordrun  
4620 \ifHy@pdfa  
4621 \PackageError{hyperref}{%  
4622 PDF/A: Launch action is prohibited%  
4623 }\@ehc  
4624 \begingroup  
4625 \leavevmode  
4626 #2%  
4627 \endgroup  
4628 \else  
4629 \@hyper@launch#7\{#3}{#2}%  
4630 \fi  
4631 \else
```

otherwise its a URL

```
4632 \hyper@linkurl{#3}{#7\ifx\#2\#2\else\hyper@hash#2\fi}%  
4633 \fi  
4634 \fi  
4635 \fi  
4636 \fi  
4637 }
```

By default, turn run: into file:

```
4638 \def\@hyper@launch run:#1\#2#3{% filename, anchor text, linkname  
4639 \hyper@linkurl{#2}{%
```

```

4640 \Hy@linkfileprefix

Anchors have a name, and marked text. We have to be careful with the marked text, as if we break off part of something to put a `\special` around it, all hell breaks loose. Therefore, we check the category code of the first token, and only proceed if its safe. Tanmoy sorted this out.

A curious case arises if the original parameter was in braces. That means that `#2` comes here a multiple letters, and the `noexpand` just looks at the first one, putting the rest in the output. Yuck.

18 Compatibility with the *L^AT_EX2html* package

Map our macro names on to Nikos', so that documents prepared for that system will work without change.

Note, however, that the whole complicated structure for segmenting documents is not supported; it is assumed that the user will load `html.sty` first, and then `hyperref.sty`, so that the definitions in `html.sty` take effect, and are then overridden in a few circumstances by this package.

```
4743 \let\htmladdimg\hyperimage
4744 \def\htmladdnormallink#1#2{\href{#2}{#1}}
4745 \def\htmladdnormallinkfoot#1#2{\href{#2}{#1}\footnote{#2}}
4746 \def\htmlref#1#2{% anchor text, label
4747   \label@hyperref[{#2}]{#1}%
4748 }
```

This is really too much. The *L^AT_EX2html* package defines its own `\hyperref` command, with a different syntax. Was this always here? Its weird, anyway. We interpret it in the 'printed' way, since we are about fidelity to the page.

```
4749 \def\@latextohtmlX{%
4750   \let\hhyperref\hyperref
4751   \def\hyperref##1##2##3##4{% anchor text for HTML
4752     % text to print before label in print
4753     % label
4754     % post-label text in print
4755     ##2\ref{##4}##3%
4756   }%
4757 }
```

19 Forms creation

Allow for creation of PDF or HTML forms. The effects here are limited somewhat by the need to support both output formats, so it may not be as clever as something which only wants to make PDF forms.

I (Sebastian) could not have started this without the encouragement of T V Raman.

19.1 Field flags

The field flags are organized in a bit set.

```
4758 \RequirePackage{bitset}
```

Each flag has a option name, an `\if` switch, and a bit position. The default is always 'false', the flag is clear. This is also the default of the switch created by `\newif`.

The names of the flags in the PDF specification (1.7) are used as lowercase option names.

```
\HyField@NewFlag #1: type: F annot flags, Ff field flags
#2: PDF name
#3: PDF position
4759 \def\HyField@NewFlag#1#2{%
4760   \lowercase{\HyField@NewOption{#2}}%
4761   \lowercase{\HyField@NewBitsetFlag{#2}}{#2}{#1}%
4762 }
```

```

\HyField@NewFlagOnly
4763 \def\HyField@NewFlagOnly#1#2{%
4764   \lowercase{\HyField@NewBitsetFlag{#2}}{#2}{#1}%
4765 }

\HyField@NewOption #1: option name
4766 \def\HyField@NewOption#1{%
4767   \expandafter\newif\csname ifFld@#1\endcsname
4768   \define@key{Field}{#1}[true]{%
4769     \lowercase{\Field@boolkey{##1}}{#1}%
4770   }%
4771 }

\HyField@NewBitsetFlag Package ‘bitset’ uses zero based positions, the PDF specification starts with one.

```

Signature fields are not supported.

Until 6.76i hyperref uses field option ‘combo’ to set three flags ‘Combo’, ‘Edit’, and ‘Sort’. Option ‘popdown’ sets flag ‘Combo’ only.

```

4855 \newif\ifFld@popdown
4856 \define@key{Field}{popdown}[true]{%
4857 \lowercase{\Field@boolkey{#1}}{popdown}%
4858 }

```

Annotation flags. The form objects are widget annotations. There are two flags for readonly settings, the one in the annotation flags is ignored, instead the other in the field flags is used.

Flag Print is not much useful, because hyperref do not use the appearance entry of the annotations for most fields.

5607 \DeclareRobustCommand*{\pageref}{%
5608 \@ifstar\NoHy@OrgPageRef\NoHy@OrgPageRef
5609 }

```

22 Localized nullifying of package

Sometimes we just don't want the wretched package interfering with us. Define an environment we can put in manually, or include in a style file, which stops the hypertext functions doing anything. This is used, for instance, in the Elsevier classes, to stop hyperref playing havoc in the front matter.

```

```

23 Package nohyperref

This package is introduced by Sebastian Rahtz.

Package nohyperref is a dummy package that defines some low level and some top-level commands. It is done for jadetex, which calls hyperref low-level commands, but it would also be useful with people using normal hyperref, who really do not want the package loaded at all.

Some low-level commands:

```

5643 \*nohyperref
5644 \RequirePackage{letltxmacro}[2008/06/13]
5645 \let\hyper@anchor\@gobble
5646 \def\hyper@link##1##2##3{##3}%
5647 \let\hyper@anchorstart\@gobble
5648 \let\hyper@anchorend\@empty
5649 \let\hyper@linkstart\@gobbletwo
5650 \let\hyper@linkend\@empty
5651 \def\hyper@linkurl##1##2{##1}%
5652 \def\hyper@linkfile##1##2##3{##1}%
5653 \def\hyper@link@[##1]##2##3{%
5654   \let\PDF@SetupDoc\@empty
5655   \let\PDF@FinishDoc\@empty
5656   \def\nohyperpage##1{##1}

```

Some top-level commands:

```

5657 \def\Acrobatmenu##1##2{\leavevmode##2}
5658 \let\pdfstringdefDisableCommands\@gobbletwo
5659 \let\texorpdfstring\@firstoftwo
5660 \let\pdfbookmark\@undefined
5661 \newcommand\pdfbookmark[3]{}{}
5662 \let\phantomsection\@empty
5663 \let\hypersetup\@gobble
5664 \let\hyperbaseurl\@gobble
5665 \newcommand*{\href}[3]{}{##3}
5666 \let\hyperdef\@gobbletwo
5667 \let\hyperlink\@gobble
5668 \let\hypertarget\@gobble
5669 \def\hyperref{%

```

```

5670 \ifnextchar[\@gobbleopt{\expandafter\@gobbletwo\@gobble}%
5671 }
5672 \long\def\@gobbleopt[#1]{%
5673 \let\hyperpage\@empty

```

Ignore star from referencing macros:

```

5674 \LetLtxMacro\NoHy@OrgRef\ref
5675 \DeclareRobustCommand*{\ref}{%
5676 \ifstar\NoHy@OrgRef\NoHy@OrgRef
5677 }
5678 \LetLtxMacro\NoHy@OrgPageRef\pageref
5679 \DeclareRobustCommand*{\pageref}{%
5680 \ifstar\NoHy@OrgPageRef\NoHy@OrgPageRef
5681 }
5682 \nohyperref

```

24 The Mangling Of Aux and Toc Files

Some extra tests so that the hyperref package may be removed or added to a document without having to remove .aux and .toc files (this section is by David Carlisle) All the code is delayed to `\begin{document}`

```

5683 \*package
5684 \Hy@AtBeginDocument{%

```

First the code to deal with removing the hyperref package from a document.

Write some stuff into the aux file so if the next run is done without hyperref, then `\contentsline` and `\newlabel` are defined to cope with the extra arguments.

```

5685 \if@filesw
5686 \ifHy@typexml
5687 \immediate\closeout\@mainaux
5688 \immediate\openout\@mainaux\jobname.aux\relax
5689 \immediate\write\@auxout{<relaxxml>\relax}%
5690 \fi
5691 \immediate\write\@auxout{%
5692 \string\providecommand\string\HyperFirstAtBeginDocument{%
5693 \string\AtBeginDocument}^^J%
5694 \string\HyperFirstAtBeginDocument{%
5695 \string\ifx\string\hyper@anchor\string\@undefined^^J%
5696 \string\global\string\let\string\oldcontentsline\string\contentsline^^J%
5697 \string\gdef\string\contentsline%
5698 \string#1\string#2\string#3\string#4{%
5699 \string\oldcontentsline%
5700 {\string#1}{\string#2}{\string#3}}^^J%
5701 \string\global\string\let\string\oldnewlabel\string\newlabel^^J%
5702 \string\gdef\string\newlabel\string#1\string#2{%
5703 \string\newlabelxx{\string#1}\string#2}^^J%
5704 \string\gdef\string\newlabelxx%
5705 \string#1\string#2\string#3\string#4\string#5\string#6{%
5706 \string\oldnewlabel{\string#1}{\string#2}{\string#3}}^^J%

```

But the new aux file will be read again at the end, with the normal definitions expected, so better put things back as they were.

```

5707 \string\AtEndDocument{%
5708 \string\ifx\string\hyper@anchor\string\@undefined^^J%
5709 \string\let\string\contentsline\string\oldcontentsline^^J%
5710 \string\let\string\newlabel\string\oldnewlabel^^J%
5711 \string\fi%

```

```
5712 }^^J%
```

If the document is being run with hyperref put this definition into the aux file, so we can spot it on the next run.

```
5713 \string\fi%
5714 }^^J%
5715 \string\global\string\let\string\hyper@last\relax^^J%
5716 \string\gdef\string\HyperFirstAtBeginDocument\string#1{\string#1}%
5717 }%
5718 \fi
5719 \def\HyperFirstAtBeginDocument#1{#1}%
```

Now the code to deal with adding the hyperref package to a document with aux and toc written the standard way.

If hyperref was used last time, do nothing. If it was not used, or an old version of hyperref was used, don't use that TOC at all but generate a warning. Not ideal, but better than failing with pre-5.0 hyperref TOCs.

```
5720 \ifx\hyper@last\@undefined
5721 \def\@starttoc#1{%
5722 \begingroup
5723 \makeatletter
5724 \IfFileExists{\jobname.#1}{%
5725 \Hy@WarningNoLine{%

5775 \endgroup
5776 \fi
5777 \Hy@DisableOption{pdfusetitle}

```

Macro \Hy@UseMaketitleInfos is used in the driver files, before the information entries are used.

The newline macro \newline or \\ is much more complicate. In the title a good replacement can be a space, but can be already a space after \\ in the title string. So this space is removed by scanning for the next non-empty argument.

In the macro \author the newline can perhaps separate the different authors, so the newline expands here to a comma with space.

The possible arguments such as space or the optional argument after the newline macros are not detected.

```

```

27.1.1 pdfTeX and VTeX

Because of pdfTeX's `\pdfcatalog` command the `/PageLabels` entry can set at end of document in the first run.

`\Hy@PutCatalog`

```
5974 <pdfTeX>\let\Hy@PutCatalog\pdfcatalog
```

The code for VTeX is more complicate, because it does not allow the direct access to the `/Catalog` object. The command scans its argument and looks for a `/PageLabels` entry.

VTeX 6.59g is the first version, that implements `\special{!pdfpagelabels...}`. For this version `\VTeXversion` reports 660.

```
5975 <*vTeX>
5976 \providecommand*{\XR@ext}{pdf}
5977 \edef\Hy@VTeXversion{%
5978   \ifx\VTeXversion\@undefined

28 Automated L^AT_EX hypertext cross-references

Anything which can be referenced advances some counter; we overload this to put in a hypertext starting point (with no visible anchor), and make a note of that for later use in `\label`. This will fail badly if `\theH<name>` does not expand to a sensible reference. This means that classes or package which introduce new elements need to define an equivalent `\theH<name>` for every `\the<name>`. We do make a trap to make `\theH<name>` be the same as `\arabic{<name>}`, if `\theH<name>` is not defined, but this is not necessarily a good idea. Alternatively, the ‘naturalnames’ option uses whatever L^AT_EX provides, which may be useable. But then its up to you to make sure these are legal PDF and HTML names. The ‘hypertextnames=false’ option just makes up arbitrary names.

All the shenanigans is to make sure section numbers etc are always arabic, separated by dots. Who knows how people will set up `\@currentlabel`? If they put spaces in, or brackets (quite legal) then the hypertext processors will get upset.

But this is flaky, and open to abuse. Styles like subeqn will mess it up, for starters. Appendices are an issue, too. We just hope to cover most situations. We can at least cope with the standard sectioning structure, allowing for `\part` and `\chapter`.

Start with a fallback for equations

```

```

Tanmoy asked for this default handling of undefined `\theH<name>` situations. It really isn't clear what would be ideal, whether to turn off hyperizing of unknown elements, to pick up the textual definition of the counter, or to default it to something like `\arabic{name}`. We take the latter course, slightly worriedly.

```

6171 \let\H@refstepcounter\refstepcounter

After `\appendix` “chapter” (or “section” for classes without chapter) should be replaced by “appendix” to get `\autoref` work. Macro `\Hy@chapapp` contains the current valid name like `\@chapapp`, which cannot be used, because this string depends on the current language.

The “french” package defines counter `\thechapter` by `\newcounterchapter`, if `\@ifundefinedchapter`.

29 Package lastpage support

Package lastpage directly writes the `\newlabel` command to the aux file. Because package hyperref requires additional arguments, the internal command `\lastpage@putlabel` is redefined. The patch is deferred by `\AtBeginDocument`, because it is possible that package lastpage is loaded after package hyperref. The same algorithm (options `hypertextnames` and `plainpages`) is used to get the page anchor name as in `\Hy@EveryPageAnchor` (see sec. 38). The link will not work if option `pageanchor` is set to false.

`\lastpage@putlabel`

```

6471 #3%
6472 }%
6473 }%
6474 \expandafter\x\LT@start\@nil
6475 }{}

```

34 Equations

We want to make the whole equation a target anchor. Overload equation, temporarily reverting to original \refstepcounter. If, however, it is in AMS math, we do not do anything, as the tag mechanism is used there (see section 41). The exception is that we move the equation incrementation inside the math environment to avoid specials outside and a wrong vertical spacing of equation environments.

```

6476 \let\new@refstepcounter\refstepcounter
6477 \let\H@equation\equation
6478 \let\H@endequation\endequation
6479 \@ifpackageloaded{amsmath}{%

```

My goodness, why can't L^AT_EX be consistent? Why is `\eqnarray` set up differently from other objects?

People (you know who you are, Thomas Beuth) sometimes make an `eqnarray` where *all* the lines end with `\notag`, so there is no suitable anchor at all. In this case, pass by on the other side.

```

6512 \newif\if@eqnstar
6513 \@eqnstarfalse
6514 \let\H@eqnarray\eqnarray
6515 \let\H@endeqnarray\endeqnarray

35 Footnotes

The footnote mark is a hypertext link, and the text is a target. We separately number the footnotes sequentially through the text, separately from whatever labels the text assigns. Too hard to keep track of markers otherwise. If the raw forms `\footnotemark` and `\footnotetext` are used, force them to use un-hyper original.

Tabularx causes footnote problems, disable the linking if that is loaded.

Redefine \@footnotemark, borrowing its code (at the cost of getting out of sync with latex.ltx), to take advantage of its white space and hyphenation fudges. If we just overload it, we can get variant documents (the word before the footnote is treated differently). Thanks to David Carlisle and Brian Ripley for confusing and helping me on this.

37 Bibliographic references

This is not very robust, since many styles redefine these things. The package used to redefine `\citex` and the like; then we tried adding the `hyperref` call explicitly into the `.aux` file. Now we redefine `\bibcite`; this still breaks some citation packages so we have to work around them. But this remains extremely dangerous. Any or all of *achemso* and *drfcite* may break.

However, let's make an attempt to get *natbib* right, because that's a powerful, important package. Patrick Daly (daly@linmpi.mpg.de) has provided hooks for us, so all we need to do is activate them.

```

6981 \def\hyper@natlinkstart#1{%
6982   \Hy@backout{#1}%
6983   \hyper@linkstart{cite}{cite.#1}%
6984   \def\hyper@nat@current{#1}%

6995 \def\hyper@natanchorend{\hyper@anchorend}

```

Do not play games if we have *natbib* support. Macro `extra@binfo` added for *chapterbib* support. *Chapterbib* also wants `\@extra@binfo` in the hyper-link, but since the `link` tag is not expanded immediately, we use `\@extra@b@citeb`, so cites in a chapter will link to the bibliography in that chapter.

```

37.1 Package harvard

Override Peter Williams' Harvard package; we have to a) make each of the citation types into a link; b) make each citation write a backref entry, and c) kick off a backreference section for each bibliography entry.

The redefinitions have to be deferred to \begin{document}, because if harvard.sty is loaded and html.sty is present and detects pdfTeX, then hyperref is already loaded at the begin of harvard.sty, and the \newcommand macros causes error messages.

```

38 Page numbers

The last page should not contain a /Dur key, because there is no page after the last page. Therefore at the last page there should be a command `\hypersetup{pdfpageduration={}}`. This can be set with `\AtEndDocument`, but it can be too late, if the last page is already finished, or too early, if lots of float pages will follow. Therefore currently nothing is done by `hyperref`.

This where we supply a destination for each page.

```

41 AMS \LaTeX compatibility

Oh, no, they don't use anything as simple as `\refstepcounter` in the AMS! We need to intercept some low-level operations of theirs. Damned if we are going to try and work out what they get up to. Just stick a label of 'AMS' on the front, and use the label *they* worked out. If that produces something invalid, I give up. They'll change all the code again anyway, I expect (SR).

Version 6.77p uses a patch by Ross Moore.

```

43 hyperindex entries

Internal command names are prefixed with \HyInd@.

Hyper-indexing works crudely, by forcing code onto the end of the index entry with the | feature; this puts a hyperlink around the printed page numbers. It will not proceed if the author has already used the | specifier for something like emboldening entries. That would make Makeindex fail (cannot have two | specifiers). The solution is for the author to use generic coding, and put in the requisite \hyperpage in his/her own macros along with the boldness.

This section is poor stuff; it's open to all sorts of abuse. Sensible large projects will design their own indexing macros any bypass this.

```

46 Configuration files

46.1 PS/PDF strings

Some drivers write PS or PDF strings. These strings are delimited by parentheses, therefore a lonely unmatched parenthesis must be avoided to avoid PS or PDF syntax errors. Also the backslash character itself has to be protected.

`\Hy@pstringdef` Therefore such strings should be passed through `\Hy@pstringdef`. The first argument holds a macro for the result, the second argument is the string that needs protecting. Since version 1.30.0 pdf_T_EX offers `\pdfescapestring`.

```

This driver is for Han The Thanh's T_EX variant which produces PDF directly. This has new primitives to do PDF things, which usually translate almost directly to PDF code, so there is a lot of flexibility which we do not at present harness.

Set PDF version if requested by option `pdfversion`.

- pdfT_EX 1.10a, 2003-01-16: `\pdfoptionpdfminorversion`
- pdfT_EX 1.30, 2005-08-081: `\pdfminorversion`

```

8263 }%
8264 \else
8265 \Hy@DisableOption{ocgcolorlinks}%
8266 \fi

```

First, allow for some changes and additions to pdftex syntax:

```

8267 \def\setpdfinkmargin#1{\pdfinkmargin#1}
8268 \ifx\pdfstartlink\@undefined% less than version 14
8269 \let\pdfstartlink\pdfannotlink
8270 \let\pdfinkmargin\@tempdima
8271 \let\pdfxform\pdfform
8272 \let\pdflastxform\pdflastform
8273 \let\pdfrefxform\pdfrefform
8274 \else
8275 \pdfinkmargin1pt %
8276 \fi

```

First set up the default linking

```
8277 \providecommand*\@pdfview{XYZ}
```

First define the anchors:

```

8278 \def\new@pdfink#1{%
8279 \ifhmode
8280 \@savs\spacefactor
8281 \fi
8282 \Hy@SaveLastskip
8283 \Hy@VerboseAnchor{#1}%
8284 \Hy@pstringdef\Hy@pstringDest{\HyperDestNameFilter{#1}}%
8285 \Hy@DestName\Hy@pstringDest\@pdfview
8286 \Hy@RestoreLastskip
8287 \ifhmode
8288 \spacefactor\@savs
8289 \fi
8290 }
8291 \let\pdf@endanchor\@empty

```

`\Hy@DestName` Wrap the call of `\pdfdest name` in `\Hy@DestName`. Then it can easier be caught by package `hypdestopt`.

```

8292 \def\Hy@DestName#1#2{%
8293 \pdfdest name{#1}#2\relax
8294 }

```

Now the links; the interesting part here is the set of attributes which define how the link looks. We probably want to add a border and color it, but there are other choices. This directly translates to PDF code, so consult the manual for how to change this. We will add an interface at some point.

```

46.2.1 Fix for problem with different nesting levels

\AtBeginShipoutFirst adds an additional box layer around the first output page. This disturbs pdfTeX's low level link commands \pdfstartlink and \pdfendlink, if a link is broken across the first and second output page.

The problem could be fixed by replacing \AtBeginShipoutFirst, because the box layer is not necessary for pdfTeX—no \specials need to be inserted. However it's easier to add an additional box level for the pages after the first one. Also \AtBeginShipoutFirst could be invoked independently from hyperref.

```

46.3 hypertex

The HyperTeX specification (this is borrowed from an article by Arthur Smith) says that conformant viewers/translators must recognize the following set of \special commands:

href: html:

name: html:

end: html:

image: html:

base_name: html:<base href = "href_string">

The *href*, *name* and *end* commands are used to do the basic hypertext operations of establishing links between sections of documents. The *image* command is intended (as with current html viewers) to place an image of arbitrary graphical format on the page in the current location. The *base_name* command is be used to communicate to the *dvi* viewer the full (URL) location of the current document so that files specified by relative URL's may be retrieved correctly.

The *href* and *name* commands must be paired with an *end* command later in the T_EX file — the T_EX commands between the two ends of a pair form an *anchor* in the document. In the case of an *href* command, the *anchor* is to be highlighted in the *dvi* viewer, and when clicked on will cause the scene to shift to the destination specified by *href_string*. The *anchor* associated with a name command represents a possible location to which other hypertext links may refer, either as local references (of the form href="#name_string" with the *name_string* identical to the one in the name command) or as part of a URL (of the form URL#name_string). Here *href_string* is a valid URL or local identifier, while *name_string* could be any string at all: the only caveat is that “” characters should be escaped with a backslash (\), and if it looks like a URL name it may cause problems.

```

```

8885 \Hy@SaveSpaceFactor
8886 \@linkdim\ht\@tempboxa

```

Because of the interaction with the dvihps processor, we have to subtract a little from the height. This is not clean, or checked. Check with Mark Doyle about what gives here. It may not be needed with the new dvips (Jan 1997).

```

46.4 dviwindo

[This was developed by David Carlisle]. Within a file dviwindo hyperlinking is used, for external URL's a call to \wwwbrowser is made. (You can define this command before or after loading the hyperref package if the default c:/netscape/netscape is not suitable) Dviwindo could in fact handle external links to dvi files on the same machine without calling a web browser, but that would mean parsing the URL to recognise such, and this is currently not done.

This was more or less blindly copied from the hypertex cfg. For dviwindo, \LaTeX must specify the size of the active area for links. For some hooks this information is available but for some, the start and end of the link are specified separately in which case a fixed size area of 10000000sp wide by \baselineskip high is used.

```

The following code (transition effects) is made by Alex Kostin.

The code below makes sense for \TeX 7.02 or later.

Please never use $\text{\ifundefined{VTeXversion}}\{..\}\{..\}$ globally.

```

9992 \ifnum\Hy@VTeXversion<702 %
9993 \else
9994 \def\hyper@pagetransition{%
9995 \ifx\@pdfpagetransition\relax
9996 \else
9997 \ifx\@pdfpagetransition\@empty

```

Standard incantation.

1. Does an old entry have to be deleted? 2. If 1=yes, how to delete?

```

9998 \else
9999 \hvtex@parse@trans\@pdfpagetransition
10000 \fi
10001 \fi
10002 }%

```

I have to write an “honest” parser to convert raw PDF code into \TeX \special .
(AVK)

Syntax of \TeX $\text{\special{!trans <transition_effect>}}$:

```

<transition\_effect> ::= <transition\_style>[,<transition\_duration>]
<transition\_style> ::= <Blinds\_effect> | <Box\_effect> |
                     <Dissolve\_effect> | <Glitter\_effect> |
                     <Split\_effect> | <Wipe\_effect>
<Blinds\_effect> ::= B[<effect\_dimension>]
<Box\_effect> ::= X[<effect\_motion>]
<Dissolve\_effect> ::= D
<Glitter\_effect> ::= G[<effect\_direction>]
<Split\_effect> ::= S[<effect\_motion>][<effect\_dimension>]
<Wipe\_effect> ::= W[<effect\_direction>]
<Replace\_effect> ::= R
<effect\_direction> ::= <number>
<effect\_dimension> ::= H | V
<effect\_motion> ::= I | O
<transition\_duration> ::= <number>

```

Transition codes:

```

10003 \def\hvtex@trans@effect@Blinds{\def\hvtex@trans@code{B}}%
10004 \def\hvtex@trans@effect@Box{\def\hvtex@trans@code{X}}%
10005 \def\hvtex@trans@effect@Dissolve{\def\hvtex@trans@code{D}}%
10006 \def\hvtex@trans@effect@Glitter{\def\hvtex@trans@code{G}}%
10007 \def\hvtex@trans@effect@Split{\def\hvtex@trans@code{S}}%
10008 \def\hvtex@trans@effect@Wipe{\def\hvtex@trans@code{W}}%
10009 \def\hvtex@trans@effect@R{\def\hvtex@trans@code{R}}%

```

Optional parameters:

```

10010 \def\hvtex@par@dimension{/Dm}%
10011 \def\hvtex@par@direction{/Di}%
10012 \def\hvtex@par@duration{/D}%
10013 \def\hvtex@par@motion{/M}%

```

Tokenizer:

```
10014 \def\hvtex@gettoken{%
10015   \expandafter\hvtex@gettoken@\hvtex@buffer\@nil
10016 }%
```

Notice that tokens in the input buffer must be space delimited.

```
10017 \def\hvtex@gettoken@#1 #2\@nil{%
10018   \edef\hvtex@token{#1}%
10019   \edef\hvtex@buffer{#2}%
10020 }%
10021 \def\hvtex@parse@trans#1{%
```

Initializing code:

```
10022 \let\hvtex@trans@code\@empty
10023 \let\hvtex@param@dimension\@empty
10024 \let\hvtex@param@direction\@empty
10025 \let\hvtex@param@duration\@empty
10026 \let\hvtex@param@motion\@empty
10027 \edef\hvtex@buffer{#1\space}%
```

First token is the PDF transition name without escape.

```
10028 \hvtex@gettoken
10029 \ifx\hvtex@token\@empty
```

Leading space(s)?

```
10030   \ifx\hvtex@buffer\@empty
```

The buffer is empty, nothing to do.

```
10031   \else
10032     \hvtex@gettoken
10033   \fi

46.7 Fix for Adobe bug number 466320

If a destination occurs at the very begin of a page, the destination is moved to the previous page by Adobe Distiller 5. As workaround Adobe suggests:

```

/showpage {
  //showpage
  clippath stroke erasepage
} bind def

```

But unfortunately this fix generates an empty page at the end of the document. Therefore another fix is used by writing some clipped text.

```

10232 <dviwindo>\def\literalps@out#1{\special{ps:#1}}%
10233 <package>\providecommand*{\Hy@DistillerDestFix}{ }
10234 <*pdfmark | dviwindo>
10235 \def\Hy@DistillerDestFix{%
10236 \begingroup
10237 \let\x\literalps@out

We have to allow for `\baselineskip` having an optional stretch and shrink (you meet this in slide packages, for instance), so we need to strip off the junk. David Carlisle, of course, wrote this bit of code.

We define a single macro, pdfmark, which uses the ‘keyval’ system to define the various allowable keys; these are *exactly* as listed in the pdfmark reference for Acrobat 3.0. The only addition is pdfmark which specifies the type of pdfmark to create (like ANN, LINK etc). The surrounding round and square brackets in the pdfmark commands are supplied, but you have to put in / characters as needed for the values.

```

The complicated bit is working out the right enclosing rectangle of some piece of TeX text, needed by the /Rect key. This solution originates with Toby Thain (tobyth@netspace.net.au).

For the case breaklinks is enabled, I have added two hooks, the first one for package setouterhbox, it provides a hopefully better method without setting the text twice.

```
\usepackage[hyperref]{setouterhbox}
```

With the second hook, also you can set the text twice, e.g.:

```

\long\def\Hy@setouterhbox#1#2{\long\def\my@temp{#2}}
\def\Hy@breaklinksunhbox#1{\my@temp}

```

```

10604 \newsavebox{\pdf@box}

Unfortunately, some parts of the pdfmark PostScript code depend on vagaries of the dvi driver. We isolate here all the problems.

46.9 Rokicki's dvips

dvips thinks in 10ths of a big point, its coordinate space is resolution dependent, and its *y* axis starts at the top of the page. Other drivers can and will be different!

The work is done in SDict, because we add in some header definitions in a moment.

```

```

Unless I am going mad, this *appears* to be the relationship between the default coordinate system (PDF), and dvips;

```
/DvipsToPDF { .01383701 div Resolution div } def
/PDFToDvips { .01383701 mul Resolution mul } def
```

the latter's coordinates are resolution dependent, but what that .01383701 is, who knows? well, almost everyone except me, I expect... And yes, Maarten Gelderman <mgelderman@econ.vu.nl> points out that its 1/72.27 (the number of points to an inch, big points to inch is 1/72). This also suggests that the code would be more understandable (and exact) if 0.013 div would be replaced by 72.27 mul, so here we go. If this isn't right, I'll revert it.

```
10964 /DvipsToPDF{72.27 mul Resolution div} def%
10965 /PDFToDvips{72.27 div Resolution mul} def%
10966 /BPToDvips{72 div Resolution mul}def%
```

The values inside the /Boder array are not taken literally, but interpreted by ghostscript using the resolution of the dvi driver. I don't know how other distiller programs behaves in this manner.

```
10967 /BorderArrayPatch{%
10968   [exch{%
10969     dup dup type/integertype eq exch type/realtype eq or%

```

The calculation of upper left *y* is done without raising the point in T_EX, by simply adding on the current \baselineskip to the current *y*. This is usually too much, so we remove a notional 2 points.

We have to see what the current baselineskip is, and convert it to the dvips coordinate system.

Argument: baselineskip in pt. The *x* and *y* coordinates of the current point, minus the baselineskip

46.10 VTeX's vtexpdfmark driver

This part is derived from the dvips (many names reflect this).

The origin seems to be the same as TeX's origin, 1 in from the left and 1 in downwards from the top. The direction of the y axis is downwards, the opposite of the dvips case. Units seems to be pt or bp.

46.11 Textures

```

11090 <*textures>
11091 \providecommand*{\XR@ext}{pdf}

```

At the suggestion of Jacques Distler (distler@golem.ph.utexas.edu), try to derive a suitable driver for Textures. This was initially a copy of dvips, with some guesses about Textures behaviour. Ross Moore (ross@maths.mq.edu.au) has added modifications for better compatibility, and to support use of pdfmark.

Start by defining a macro that expands to the end-of-line character. This will be used to format the appearance of PostScript code, to enhance readability, and avoid excessively long lines which might otherwise become broken to bad places.

\Hy@ps@CR The macro \Hy@ps@CR contains the end-of-line character.

```

11092 \begingroup
11093   \obeylines %
11094   \gdef\Hy@ps@CR{\noexpand
11095     }%
11096 \endgroup %

```

Textures has two types of \special command for inserting PostScript code directly into the dvi output. The ‘postscript’ way preserves TeX’s idea of where on the page the \special occurred, but it wraps the contents with a save–restore pair, and adjusts the user-space coordinate system for local drawing commands. The ‘rawpostscript’ way simply inserts code, without regard for the location on the page.

Thus, to put arbitrary PostScript coding at a fixed location requires using *both* \special constructions. It works by pushing the device-space coordinates onto the operand stack, where they can be used to transform back to the correct user-space coordinates for the whole page, within a ‘rawpostscript’ \special.

```

11097 \def\literalps@out#1{%
11098   \special{postscript 0 0 transform}%
11099   \special{rawpostscript itransform moveto\Hy@ps@CR #1}%
11100 }%
11101 %

```

The ‘prepostscript’ is a 3rd kind of \special, used for inserting definitions into the dictionaries, before page-building begins. These are to be available for use on all pages.

```

48 Bookmarks in the PDF file

This was originally developed by Yannis Haralambous (it was the separate `repere.sty`); it needed the `repere` or `makebook.pl` post-processor to work properly. Now redundant, as it is done entirely in \LaTeX macros.

To write out the current section title, and its rationalized number, we have to intercept the `\@sect` command, which is rather dangerous. But how else to see the information we need? We do the *same* for `\@ssect`, giving anchors to unnumbered sections. This allows things like bibliographies to get bookmarks when used with a manual `\addcontentsline`

```

13238 \def\phantomsection{%
13239 \Hy@MakeCurrentHrefAuto{section*}%
13240 \Hy@raisedlink{\hyper@anchorstart{\@currentHref}\hyper@anchorend}%
13241 }
13242 </package>

```

48.1 Bookmarks

```
13243 <*outlines>
```

This section was written by Heiko Oberdiek; the code replaces an earlier version by David Carlisle.

The first part of bookmark code is in section 6. Further documentation is available as paper and slides of the talk, that Heiko Oberdiek has given at the EuroTeX'99 meeting in Heidelberg. See `paper.pdf` and `slides.pdf` in the `doc` directory of `hyperref`.

When using the right-to-left typesetting based on $\varepsilon\text{-TeX}$, the order of the `\BOOKMARK` commands written to the `\@outlinefile` could appear wrong, because of mis-feature of $\varepsilon\text{-TeX}$'s implementation (that it processes the shipped out lines left-to-right, instead of the order in which they appear in the document). The wrong order will appear when the file contains two bookmarks on the same line typeset right-to-left.

To work around this problem, the `bookmark@seq@number` counter is used to write the bookmark's sequential number into a comment in the `\@outlinefile`, which could be used to post-process it to achieve the proper ordering of `\BOOKMARK` commands in that file.

Tobias Oetiker rightly points out that we need a way to force a bookmark entry. So we introduce `\pdfbookmark`, with two parameters, the title, and a symbolic name. By default this is at level 1, but we can reset that with the optional first argument.

13394 }

```

The macros for calculating structure of outlines are derived from those by Petr Olsak used in the `texinfopdf` macros.

48.1.1 Rerun warning

`\Hy@OutlineRerunCheck`

```

13395 \RequirePackage{rerunfilecheck}[2009/12/10]
13396 \def\Hy@OutlineRerunCheck{%
13397 \RerunFileCheck{\jobname.out}{%
13398 \immediate\closeout\@outlinefile
13399 }{%
13400 Rerun to get outlines right\MessageBreak
13401 or use package ‘bookmark’%
13402 }%
13403 }

```

48.1.2 Driver stuff

The VTEX section was written originally by VTEX, but then amended by Denis Girou (denis.girou@idris.fr), then by by Taco Hoekwater (taco.hoekwater@wkap.nl). The problem is that VTEX, with its close integration of the PDF backend, does look at the contents of bookmarks, escaping \ and the like.

```
13404 <*vtex>
```

```
13405 \newcount\@serial@counter\@serial@counter=1\relax
```

\hv@pdf@char Plain octal codes doesn't work with versions below 6.50. So for early versions hex numbers have to be used. It would be possible to program this instead of the large \ifcase, but I'm too lazy to sort that out now.

```

49 Compatibility with koma-script classes

13722 <*outlines | hypertex)

Hard-wire in an unpleasant over-ride of komascript ‘scrbook’ class for Tobias Isenberg (Tobias.Isenberg@gmx.de). With version 6.71b the hack is also applied to ‘scrreprt’ class and is removed for koma-script versions since 2001/01/01, because Markus Kohm supports hyperref in komascript.

14622 \DeclareTextCompositeCommand{\v}{PU}{l}{\81\076}% U+013E

There seems to be no variants of letters ‘L’ and ‘I’ with a dot above (reasonable). Therefore the \. accent is reused instead of making a separate accent macro \textmiddledot.

```
